Yahoo Group Archive: ATARI-MIDI-ARCHIVES

These Yahoo Groups messages were archived in WARC format by ArchiveTeam in 2016. This PDF was generated by Kay Savetz in 2026.

Date span: 2001-02-17 through 2016-11-12

Source WARC: atari-midi-archives.ReENddb.warc.gz

Source item: https://archive.org/details/yahoo-groups-2016-12-14T13-22-05Z-7ab054

Messages included in this PDF: 791

Message records with no body available in the source archive: 2

Messages omitted as spam from this PDF: 13

Yahoo replaced the domain portions of email addresses with @... in the archived messages. Characters lost in Yahoo's archived text appear as ?.

Messages are presented in ascending Yahoo message-ID order. Gaps indicate records absent from the source WARC or messages omitted from this PDF as spam.

1. New file uploaded to atari-midi-archives

Yahoo group: ATARI-MIDI-ARCHIVES

From: atari-midi-archives@yahoogroups.com
Topic: 1 Message: 1

Hello,

This email message is a notification to let you know that
a file has been uploaded to the Files area of the atari-midi-archives
group.

File : /UTILITIES/Sttodsk.ttp
Uploaded by : tconrardy@...
Description : Converts an ST format file (disc image) into a "real" Atari disc that can run on a real Atari. Simply drag the ST format file into the TTP program, make sure you have a 720K disc in the Atari disc drive, and it will write the ST format to disc.

You can access this file at the URL

http://groups.yahoo.com/group/atari-midi-archives/files/UTILITIES/Sttodsk.ttp

From: tconrardy@hotmail.com
Topic: 50 Message: 50

Hi Trond (and all other 8 members here)

As you might know by now, Emile has declared MidiAx Shareware.

I decided to create a DIR in the archives for it, so it is here:

http://groups.yahoo.com/group/atari-midi-
archives/files/APPS/ALGO/MIDIax/

I have already uploaded all the docs that you sent me previously for
review.(and even printed them out and have them inserted into a
binder already!)

When you have time,Please Upload the actual program to this DIR.

Thanks!!!

looking forward to this!!!!!

Tim

Yes... Cubase has the ability to import Pro24 files. Once in Cubase, you can convert it to midi files.

But I also believe that pro24 can create midi files as well.

If you do not have access to Cubase, you can send the files to me personally at tconrardy@... and I can do the conversion for you.

Comments?

Tim C

Hey Tim,

You are very gracious with your offer and I would like to take you up on it. I have Cubase 5 but I can't seem to get these to load. I hope that you have better luck than I have.

Thanks a lot for this and if there is anything I can do in return, please feel free to ask.

Cheers,
Bob

Hi Bob

Its ATARI CUBASE that can do the conversion, not the PC version :-)
I will work on it in the next few days or so.

Tim

194. New Uplaod

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2002-02-10 17:57:19 UTC
From: gbi_ev
Topic: 194 Message: 194

hello atarians and kawai xd-5 users,

there is a new utility for the kawai xd-5 (drum) synth.

it loads and read midi and syx files, AND: it reads files
for the kawai k4, too. the converted k4 sounds can be
transmitted to the xd-5. a very simply randomize function
is there too.

may be it is helpful for some of you.

hellmuth

From: shadowtraker
Topic: 227 Message: 227

i recently found one (literally on the side of the road) plugged it in and it booted right up! the only thing i know is that i've always wanted one because in the 80's this was THE midi pc to have.

any and all links and or info would be GREATLY appreciated. looking for HW mods, i'm not afraid of a soldering iron, but a HD would be a pretty necessary thing.

thanks

j

>wanted one because in the 80's this was THE midi pc to have.

WOW!!! What a find! I once found an AtariXL (8 bit) computer on the road
(during "spring cleanup")
>
>any and all links and or info would be GREATLY appreciated. looking
>for HW mods, i'm not afraid of a soldering iron, but a HD would be a
>pretty necessary thing.

go to my faq page which has plenty of links...like the Atari Quick Faq which
should answer most of your Q's.

http://tamw.atari-users.net/download.htm

then go here and start downloading:

http://tamw.atari-users.net/dwnloads.htm

However, the beauty of Atari is that YOU DON"T NEED A HARD DRIVE!!!
You can run everything from disc(720K discs that is!!)I run my STe that
way...and it is QUIET!

229. Regenerative Music Using FINGERS

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2002-07-31 05:23:54 UTC
From: Tim Conrardy
Topic: 229 Message: 229

Hi all:

I was going thru some of my TXT files and found this Experiment I did. You can use MIDI AXE for this, as it contains Fingers

http://tamw.atari-users.net/midiaxe.htm

Comments welcome. Anybody else know another way to do "regenerative Music" ??

TimC
==========

Regenerative Music Using FINGERS (from Dr T software)

1. You will need two Atari Computers, or One Atari Computer and a "hardware" sequencer, (or a Midi keyboard workstation)with a SEED sequence. The idea is the "seed" sequence is "fed" into the Fingers program, and Fingers "regenerates it, or replays constant versions of the same peice, but all different.
The Midi OUT of the SEED system goes to the MIDI IN of the system running FINGERS. MIDI OUT of the system running FINGERS to your modules.

2.Set up FINGERS as follows:
A. make sure you have a "blank" default with no pitches or velocities generated.
B. Select the PIT(ch) top selectors so the arrows are going into the next PIT(ch) series.Do the same with the VEL(ocity) series. Thus at the top of the screen you should see this:

PIT>PIT>PIT>PIT>VEL>VEL>VEL>VEL>

C. You can put in some TIM(ing) values as these will not be generated from the seed source. To keep the Timing constant, just keep it at the defualt value of 12.

D. Select REC(ord) from the bottom menu. then select START. You will hear a drone of one note.

3.. Start the SEED system sequence.You will then see Fingers capturing the data, but as the seed sequence continues to play, Fingers continues to capture it since it is still on record, yet outputing the midi data at the same time.Also Fingers is on continous "loop" mode restarting itself at the beginning of the PIT(ch) and VEL(ocity) Series. Thus a "form" of regeneration will be apparent..
Note: the usual function of REC(ord) is to input a scale using a midi keybrd. Using it this way is a bit experimental, but that is what this program is for anyway!

4. You can also be interactive with it and play with patch changes, Global transposing using the 10 keypad, muting and unmuting channels, ect all while the music is playing.

From: dizardsdreams
Topic: 233 Message: 233

I have been getting help as regards my atari problems so here is something back.I managed to make a midi signal splitter,to be used for triggering lots of midi stuff off,and it is very!easy to make.I was wanting to send midi dater to a roland mt32(I have four!),from midi sync software,but then change patches from another machine,running an editor,plus lots of other strange configs.In short all you need to do is conect the pins from a 5 pin din,solder on two bits of wire from each single pin,then connect these to two seperate 5 pin dins at the other end of a sutable box.It been a mirror image you have to swap over conections right side to the left.You need to solder in 220homs resisters on the pins that carry a power signal so that you dont overload the outs,especially if you turn it around and have two signals going into one.I have made four units for my setup and they work great.Note that these units are not midi merge units.They can only carry one set of information at a time,which is all I wanted then to do.I am not an electrician And you do this on your own head,but it works for me,saved a fortune on midi box thingis. If anyone want more details I could always do a diagram,mel

wow...4 MT32's ??!! I am a big Fan of the Mt32 and have explored it's "analog" side and made a bunch of sounds for it in Caged Artist Format. Its on the Atari-MIDI archive's file section under sounds/roland/mt32

what editor do you use?

thanks for the hardware tips...is it a sort of MIDI Thru box?

Its called DMA, and it is NOT IDE. Mario Becroft makes a converter. See my download faq page for the link.

also...just to clarify...i think you are getting this only if you are trying
to download from the Atari-MIDI archives site (at yahoo groups)

am I right?

This really stumps me as the file section is open to the public. Anybody
have problems getting to these sites or having download problems?

Hi! Sorry to hear you are having hard times with the hard drive:-) Don't know what to say. Regarding the list: this particular list (the Atari-MIDI archives...however I am copying Atari-MIDI on this mail.) is basically for storing files and the messages are just "notifications" that a file has been uploaded. To get into the beef of the matter, you need to send your mail to

atari-midi@yahoogroups.com

This is the main Atari-MIDI forum, while this group (the Atari-MIDI Archives)is just for "notification" of uploads. Unfortuneatly, our archives are getting pretty full at the moment! :-)

>I am beginning to think that It might be better running atari

YES...there are many users who do not have real Atari's but use Steem and run the more "unusual" left handed Atari apps that you would be hard pressed to find on the PC format. There are some members who use Steem running KCS as thier main sequencer and use Hubbies loopback to control softsynths on the same PC!

However, a real Atari can still be useful in the studio, even DISC only stuff (no Hard drive) as there are lots of programs that run fine by disc.

>The making money posts have been interesting,especially the

well...it would be nice to make a little money with our stuff...but looks like we have to find our own paths on how to do it!

hi atari people,just got reply 16 through the post,won of ebay for a tenner,including postage,looks great, 4 discs in wallet and everything.Until my atari is going all I can do is look at it though. (Awaiting a new floppy)I am hoping to use it on a pc via the steam emulation program.I am hoping that with this option I will be able to use more then the 4 meg sample memory in an atari?
looking at the manual I can use it with my s1000,great,All i need is a scsi out card for it,you would off thought that sample memory would of come down for these machines by now.
I aint any cash at the moment but has anyone got any memory boards going for the s1000 akai sampler,say 2 meg as a result of an upgrade?
Cant waite to check out all these programs that tim has and keeps finding....patience is a virtue,what the virtue actually is is beyond me.
Been listening to christiphor franke just lately,babylon 5 one,I no he has done lots of other stuff,anyone recommand another one of his cd,s before I shall out?
Hope all are well and erm...well thats it for now....time for a cup of tea and crumpet,the edible type only I am afraid.

Is that the one with the hardware add-on to the cart port?

I am hoping to use it on a pc via the steam
>emulation program.I am hoping that with this option I will be able to
>use more then the 4 meg sample memory in an atari?

If it has a hardware add-on...this might be a good Q for the Steem list,(the
programmers are there) as they are trying to emulate different ports on the
Atari. Don't know if it would work with replay 16, but would make a good
challange for the steem programmers!

>Been listening to christiphor franke just lately,babylon 5 one,I no
>he has done lots of other stuff,anyone recommand another one of his

I got the Live one in paris..it was before babylon5 days. Its real good
however.

>Hope all are well and erm...well thats it for now....time for a cup

Topic: 248 Message: 249

Hi Marlo

Do you have a Hard Drive?

When it starts to boot you can try holding down the Control key and it should bypass any auto folder stuff, which I believe is your problem.Then go into the auto folder and try renaming the extensions of any 'wierd" programs to .prx(with the file/show info dialog.Then give it another boot.

Hope this helps!

250. 4 BOMBS

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2002-12-06 20:42:08 UTC
From: Marlo Henderson
Topic: 250 Message: 250

Tim; GOOD LOOKIN OUT!!!!
I spoke with a nice guy this morning about the problem and he offered to help me out for only 40 bucks oh and I had to ship the computer to him "no more than a 7 to 10 day turnaround". He'd probably do what you've instructed me to do. My Falcon is a staple in my MIDI/digital audio system, I'm using Hybrid Arts smpte track with the smptemate plus box, the system has never dropped a frame since 1995!
Thanks You Again!

Marlo

Hi Marlo

Good to know another SMTPE track user. Do you have the latest beta from my site? Its pretty neat with lots of new features.

However I have to tell that this grp (Atari-MIDI Archives) is just a spill over for the file section on our "real" forum, which is Atari-MIDI . You might want to join that,(see sig) as joining this one (the archives) is so you will be notified if there are new uploads, plus you can upload yourself. Our space is getting pretty full however.

Therer are also lots of SMPTE track users on Atari-MIDI, most notably this guy named Charlie (in the swamp) You should get along just fine:-)

I hope what I told you was the fix.Please let us know. I tried the command to make sure on my own Falcon, and it works.(control while it boots)It does bypass the auto folder and ACC's as well. learned that from the Atari-Quick Faq!!(SEE MY DOWNLOAD FAQ PAGE)

253. cubase lite

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2003-01-29 05:12:04 UTC
From: babyatari2003 <babyatari2003@yahoo.com>
Topic: 253 Message: 253

G,day.
Can anyone help with the cubase lite prg for my 1040STe?
I downloaded it from Tims web site and opened the zip using STZIP.
When I load the prg. 4 or 5 files that are on the disk cant be found
by the prg. when it is loading.
The 1040STe is standard except for the 4mb of ram.
Any help please.

254. Re: cubase lite: finding MROS

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2003-01-29 06:45:37 UTC
From: Tim Conrardy
Topic: 254 Message: 254

Welcome to the grp

I have forwarded this to the Atari-MIDI main forum, as the Atari-MIDI archives is just that: an archive of files, an extension of our file section at Atari-MIDI.

I get this question a lot ever since I have put Cubase Lite up on my site. Basically people are having a hard time installing it as Cubase-lite cannot find Mros.

The fix was to unzip it without folders right onto the disc or HD. But looks like this new member is still having problems

can anybody suggest anything?

here are my installation instructions from my page:I have had no problems using this method.

INSTALLATION INSTRUCTIONS:
For floppy only systems:
Unzip the cu-lite.zip onto your PC/Mac hardrive. Open the Cu-lite folder.Copy the contents right to a 720K disc in the disc drive (no main folder)Put the disc in your Atari and open A-drive. You should now see this:<P>

cb_lite.dat (folder)
mros(folder)
printers(folder)
songs(folder)
cb_lite.prg
def.all

The cb-lite.prg should be by itself and not in a folder, but on the main directory of the disc (called the root directory)This way mros will be in the correct pathway and will load properly.

Not to slam other platforms, I can't believe I waited this long to use the Atari platform. I am amazed at how much can run within 1 to 4 meg of memory. VST in my opinion stands for Very Short Temper as I have never had the stability on PC or MAC that the Atari seems to have. Time will tell when bugs start appearing, but right now AWESOME!!!

Great! You will find your attitude prevalant among Atari users.

However...you might want to post to the main Atari -MIDI grp as this grp is basically for archives...lots of files to fill up your Atari HD's are available here:-)

the other grp/forum has over 400 members, while here is only 86 or so.I think you have already subscribed.

270. Tentrax "sng" files

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2003-08-17 19:19:27 UTC
From: bradeve_1999
Topic: 270 Message: 270

Hello everyone from a new member.

My beloved Atari 1040ST died recently, although I still have a box of valueable songs on 3.5 floppys. I have managed to convert a lot of the files into a format that my PC will read and can still run my midi information on my brand new PC. However, naturally the song I need the most was written on a program called "Tentrax" which saved it's songs as a file format called "SNG". Is there any possible way of converting these into a midi file or a cubase format so that I will be able to finish my masterpiece??? Any help would be greatfully appreciated. Cheers Brad

Hi Brad

If you can read the file on PC (perhaps using gemexplorer...see my FAQ page) I can try to convert it for you as I have tentrax. Nice software for the MT32!

send to:
tconrardy@...

BTW: this list is mostly for archiving files. If you want to get where the action is, join the "original" Atari-MIDI forum. See my site under forums.

277. Looking for final versions of ...

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2003-09-26 17:48:59 UTC
From: Larry T.
Topic: 277 Message: 277

Hi All

I have aquired a Falcon, TT030, and Mega ST2 from eBay. I have also aquired Sonus Masterpeice, Steinberg Cubase Audio, Steinberg Avalon, and the Steinberg 16 bit D/A unit, all with their hardware dongles/keys. (I also have the Sonus sample editor for the Akai S900/X7000 which I have from long ago with my 520 ST.) Is there anyplace that I can get the final/latest versions of these programs? I am not sure which versions I have yet, but I would like to be sure that I have the final versions that were released.

Thanks for the assist!

Larry

Try these websites.... The aty one has been a excellent resource for me. They still support Atari quite extensively.... I bought a STACY from them and have been very please.

The other website is located in the UK, but has final versions of many Atari programs including C-Lab Notator which ilater became Emagic Logic on the Mac.

http://www.infinex.com/~atycom/ <http://www.infinex.com/~atycom/>
http://www.keychange.co.uk <http://www.keychange.co.uk>

Hope these sites help,
Leo

Hi Larry and all

For Stienberg stuff, go to my cubase page and thier is a link to a french site for all the Cubase updates. excellent. All the latest versions are thier.

http://tamw.atari-users.net/cubase.htm

And since you have a Falcon: check out some of the new apps we have for falcon:

ACE MIDI(a 2 osc, 2 env, resonant filer, 16 part multi-timbral synth!)
AEX
Quaderno Falcon

all on my software page.

Dear Members:

Excuse me for sounding totally naive but I'm hoping someone can help. I have a Dx7, and downloaded a file from this site of sounds that I would like to put on it. How do I go about it? What equipment do I need? Is it relatively simple? Does anyone have a link to a step=by-step tutorial? Feel free to either post a reply or drop me an email. Thanks a lot!

287. CASIO VZ8M librarian dilemma

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2003-11-19 10:26:52 UTC
From: ashrait
Topic: 287 Message: 287

Hi all,

I have installed Steem ST Emulation on my PC, loaded some of the apps I used to work with years ago on my Atari and found a librarian for the CASIO VZ8M synth. Files are in .VMC and .VZV format and the name of the software is VZDUMP (Version 2.0) of 21 May 1992. Well, I cannot load any of the banks I had saved at the time. I read somewhere that .VMC and .VZV files are Dr.T compatible, but I don't have Dr.T.

If anyone can help, I'll give my Casio sounds (1600 patches approximately) and other software I've got in exchange for assistance with this problem.

I would use PC DOS formatted discs so you can also read them on PC and your
Atari can read them too. See my FAQ page on my site.

Hi Peter,
You shouldn't be having these problems if you're using something like
Fastcopy with Atari format disks. I would hazard a guess that your
disk drive might be on the way out if you're copying to and from the
Atari. If you're having problems with DOS formats then Tim has
answered your question.
Barrie at Keychange can provide replacement disk drives.

Best wishes,

David.

297. OT: Falcon030 recasing project?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2003-12-19 06:52:58 UTC
From: Chris
Topic: 297 Message: 297

Hi folks,

I know this is SLIGHTLY off topic, but it STill pertains to the Atari. :-)

Anyone know of any project plans, article(s) or even a web sight that
would let someone recase a Falcon030 into a PC tower case?

Any help would be greatly appreciated.

Thanks,
Chris

g'day

298. missing file from avalon 2 for atari can someone help

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-01-14 18:03:32 UTC
From: simeon webber
Topic: 298 Message: 298

im looking for the file
playgame.ovl appears corrupted in my copy now

it lives in the OVERLAY folder

in avalon v2 {not 2.1 it used a different file and has a bug i cant shift}

if someone has it can you mail or pm me a copy of this file

TIA

299. Panning with the sequencer

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-02-05 15:25:51 UTC
From: Mariano Capezzani
Topic: 299 Message: 299

Hi all,

I have a windows-based sequencer, and I can't seem to add any panning effects to my Kawai K5 patches. I can pan a patch from the internal PC souncard synth, but not the K5.

Any ideas on why I can't?

Regards,

300. [atari-midi-archives] Wanted: Steinbergs Avalon

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-02-05 19:57:28 UTC
From: swiftytheavenger@aol.com
Topic: 300 Message: 300

Hey, im an avid atari user and i have been on the lookout for Steinbergs program called Avalon, if anyone knows where i can get a copy, or knows anyone who has one for sale. just email me up at swiftytheavenger@...

thanks!

301. RE: [atari-midi-archives] Panning with the sequencer

This comes down to the module itself. Does a K5 acceptCcontinous Controller
10 for panning? If you don't have stereo out puts, then the K5 can't be
controlled like this. The MIDI spec in the manual should tell you .

Yep, that's it. No controller #10 supported, just checked in the manual. :-(I'll have to record the audio track with Cubase and pan it there. Thanks!

303. Bank Select Command

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-02-17 23:22:19 UTC
From: Andy Evans
Topic: 303 Message: 303

Hi

I'm new to the group and pleased to see there still is interest in this platform and software.

I mainly sequence using the Atari running logic as I was unaware of being able to use Bank Select commands on Notator. I have heard this is possible and would like to know how. Can anyone assist?

Regards

Andy Evans

307. Atari STe/f YMchip MIDI control

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-03-01 23:28:30 UTC
From: gahmin
Topic: 307 Message: 307

I want to control one (in fact two) atari 520STE via its midi port with my MPC 2000(sequencer) to use it(them) as an expander, but I don't know which program I should used ...
I already used MiniMoo (only one voice)or Quartet (seems not possible to use the 4 voices at the same time thru MIDI ...) , but what I want is to use the 4 available voices of the atari just like most trackers do...
Do you know a program that could do (even if it is designed for something else)? a tracker that is MIDI controllable ?

thanks a ton for anyone answering,
mahakhooni gahmin.

ps: this is part of a "ST only" project , I already know about VST pug-ins and emulator, I want the sound to come out directly from the YM chip !

316. .son files - invented by the devil ?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-03-25 20:58:17 UTC
From: hammersteen
Topic: 316 Message: 316

importing atari creator files into cakewalk on the pc is not very difficult. i saved my patterns as standard midi files and that's basically it.

however the problem is that i had complex arrangements on my atari. there are patterns all over the place and it's a nightmare to recreate them on the pc. but all this information is stored in the .son files.

i believe from what i've read the only program capable of reading .son files is emagic logic.

i don't own that software, can't find a demo etc. so that's not an option. if i had a .son file format spec i could maybe work out what's going on but i can't find one anywhere either.

i can't believe i'm the only one with this problem. but having looked all over the internet i'm beginning to think i am.

317. RE: [atari-midi-archives] .son files - invented by the devil ?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-03-28 06:44:36 UTC
From: Tim Conrardy
Topic: 316 Message: 317

well...I think the best thing to do is to make a project of it, and simply
run your Atari with Notator into a PC sequencer , lock up the MIDI clocks,
and simply play Notator into it.

thanks for the tip. i tried that when i first moved to harddisk recording on the pc. the result wasn't very accurate, though. especially with a lot of traffic coming through it wasn't good at all.

anyway, my ST1040 has been in a box for about five years now and i don't wanna go through all the hassle of setting everything up just to be disappointed when i've got all the .son and .mid files on a disc.

Oh no... It doesn't work that way.
I have a TX7. If you initialize it, it will just be empty. You need to download the original presets off the internet. Good luck in your search.

Hi Charles

Sorry I did not respond...been busy

You can post MIDI files in the Files section. I think there is a folder called MIDI Files. Since you are a member, you ar allowed to do so. Just go to the main Yahoo site

http://www.yahoogroups.com/group/atari-mid-archives/

and click on Files, then go to the MIDI Files folder and UPLOAD. Be sure to check to "notify the group".

Thats it (i hope)

and Thanks...we appreciatte it!!

Tim

Greetings all.

One time not so long ago, an atari user who'd also done some recordings of his one posted a song online called "AntiJarl" about a net.loser who'd been posting drivel in one of the music related news groups. Perhaps we could do the same, working their real name and perhaps email into the lyrics and drop it in their mail box as suitable revenge. Would be more humourous than just listing their name, address, credit card, phone and ip address into alt.2600.

I know some people who are so fed up with spammer
slime that they are seriously contemplating methods of
ridding the world of the worst of them, permanently.

I hope this piece of shit gets so big that he has to
hire guards and hide behind bolted doors to ensure he
keeps living. I also hope he fails to do so.

Yeah, post it all.

Jigger.

There are a few less than subtle methods of dealing with spammers that doesnt involve giving them a fiver. One who spammed me years ago soon found his paid-by-the-K mailbox full of large text files containing line after line of SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM SPAM repeated ad nauseum. a simple script in Flash1.6 manage to put those files together and send them off to hapless gormless spammer. Another spammer, a univirsitiy computer science student, found his spams being forwarded back to his class group, instructors, computer lab monitors, dean of his college, etc. along with his foul mouthed racist "responses" to my reporting him. Not that he kept it up after he lost access to every computer in the university for his acitons. I've also heard of (but didnt take part in) methods where spammers found their shell replaced by a shell script consisting of one line, a logout command

Hey Y'all -

I would be very cafeful about sending any kind of reply to these spam addresses.
Once you do, they add your personal address to their data-bases - they know it has a human being on the other end.

These spams are annoying enough coming through a user group. How'd would you like this crap coming directly to you, in bucket-fulls! I'm sure these spammers buy, sell and trade our addresses.

"atari-midi-archives@yahoogroups.com" is on the Spammers lists. As soon as the moderator (Tim?) blocks one spam address, the spammer creates a new Yahoo or Hotmail account and sends more crap to "atari-midi-archives@yahoogroups.com".

Perhaps the moderator (Tim?) can create a block list that stops anything mentioning interest rates or sexual performance.

The only other solution I can see is to change the group's address to something like atari-midi-archival@yahoogroups.com and let us all know.

Then, wait a few months til the spammers find us again.

David

Another dirty trick spammers use is to use unsecured mail servers like the one for my isp. They can send spam from other peoples accounts this way very easily. On top of that there are isp's who simply dont care to secure their own servers at their own perill. One other thing we can do is report this to our isp's if it happens. Hopefully they'll take it seriously to make changes, if not the thought of disgusted customers leaving in droves to their competitors might change their minds.

HJi Charles

To be honest...this is the first time I have heard it, but may have missed it.
so..are you saying an STf?...it may not have enough memory to load the program. That may be the reason why. It's been a while since I ran the program however. Have to look into it again!

well tim i put what know how to work and you might be rught on first thought
but it beond my computer know how.
the other thing i found was that when the screen pictures (the pi3 for high
resolution )are loaded into a picture viewer ,only one is visable the other
is unreconized.weird circumstances!!! had not tried another reolution mode
or my ste will get back to you with results gotta go email later to day
(tues july 20) thanks"getting to the root of this !"

> Does anyone have the factory performances that came with the TX802.
> I think there were 54 with 10 empty spots.

Hi "Sharkie",

did you still need the factory performances for the TX802 ?

I have them available in GenPatch format (+ all the other original settings) and I could mail them to you together with GENPATCH.ACC, so you could transmit them via ATARI or any MIDI-connected Emulator (STEEM is great) to your TX802.

If you use GenPatch I could also send you some great CONFIGs to get the best out of you ATARI/TX802 setup.

Send me a note, Gregor

359. TT030 audio workstation

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-09-16 22:39:16 UTC
From: JAMES M. ALEXANDER
Topic: 359 Message: 359

Hi there,

Now back to something remotely related to what this list is really for.

I've gotta TT030 that I'm fixing up with a startrack audio board (is a digital audio recording / playback board for vme bus). Anyways I dont really like the software that came with it since its an unfinished alpha version. What I really need to find is a reasonably good piece of software to allow me to do the following:

Record and playback audio via the startrack board at 16bit 44.1khz rate, A *MUST HAVE* feature.

Handle files larger than physical memory (if you've ever tried cool edit pro for winblows BLEH!!, you'll know what I mean), Another *MUST HAVE* feature

record & playback WAV & AVR format audio

Resample audio files to more than one sample rate (would be a bonus)

Perform noise reduction on audio files (ie. hiss reduction and click / pop reduction), for what I need this is a *MUST HAVE* feature (again).

Be able to use the DSP sub-board for the startrack card (which I also have), something I'd strongly like to see (would save me hours & hours).

I've seen and tried a few programs on a Falcon030 which look promising but most rely on Falcon TOS (4.1 / 4.4) and while they may run on a TT030, many of the features will have a horrific system crash on a TT cause of differences in TOS versions.

thanks
James

360. Stephan Wilhelm anywhere?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-09-23 17:11:51 UTC
From: JAMES M. ALEXANDER
Topic: 360 Message: 360

Hi Everyone

Does anyone know the current whereabouts of Stephan Wilhelm of Germany?

In case you didn't know he's the person who produced those startrack boards for The Atari TT030's & medusa clones.

The reason I need to find him is he's sold me (supposedly) the last working star track board about 6 months ago. I paid $560 canadian for this board and when I recieved it I was shocked to discover that the software was incomplete and buggy (as per my last post to this group) but not only that the board simply does not work at all and despite his many empty promises I've recieved absolutely NO documentation at all.

I need to locate Stephan Wilhelm immediately. Since he's dissapeared after 6 months of non action I must corner him to fix the board & software (including documentation he promised many times), or refund my money in full.

I personally find it disgusting that this kind of dishonest behaviour is still going on in the atari scene. To be honest, if he doesn't make good on the problem he's saddled me with I'll be making a case for mail fraud, and soon. I needed this audio board for a recording business. Now 6 months later I've lost not only the money I paid on it but hundreds of dollars in lost business and the bad will of my customers because of this situation. I know some of you will wonder how I can talk about Stephan like this in poublic, consider this: I've paid a lot of money for a product that does not work. He's made vague promises to make it right but done nothing. He knew at the outset I needed this device for my business and did this anyways leaving me for all intents, out of business.

Hi James

sorry to hear this.

You should post on the main atari forum on the usenet groups. Its been a long time for me, so I can't even remeber it's name :-) But you will get more reaction and response as well.

Tim

Hi Tim,

Thanks for replying, I'm sorry about it as well, I been sorry since I recieved the so called piece of hardware. Whats worse than the loss $560 I spent on it is the loss of business because of it. What especially burns me is the way he'd pass off a bunch of excuses and vague promises that never amount to anything. I think the only way I'll ever get any real action out of this scoundrel is to expose him as the huckster he is, and to back up the threat of reporting him for mail fraud with action. On top of that he's still advertising his "one remaining audio board" for sale. If someone else makes the foolish mistake I did and sends him $500+ what will they get? probably nothing!

I did think of mentioning this on usenet but unfortunately the way usenets gone all I'd get to show for it is hysterical laughter from the noisy negativists and a lot of spam.

From: JAMES M. ALEXANDER
Topic: 360 Message: 363

Hi Tim & Group,

I have another update to this situation. But not good news I'm afraid. After several emails over the past two months, culminating in an email to stephan wilhelm stating I would proceed with legal action if he did not correct the damaged audio card and buggy software he sent me, which he blatantly mis represented, he has finally replied. Unfortunately as of yet he still refused to acknowledge there is a problem at all. His reply in essence blames me for the fact the audio board wasn't in working condition before he sent it to me. He also blames me for the fact that the software is buggy, only partly translated, and the documentation being incomplete and over 90% untranslated. All things he conviently "forgot" to tell me before he had my money in hand.

In all honesty, I dont like airing this laundry in public but I have little choice. I've been trying to sort this out in private for *MONTHS* to no avail. But thats not the end of it. What I bought was what he claimed was the last unsold Startrack audio card (now I know why it went unsold!), yet his website for this board is still up and he's still advertising it for sale! I don't want to be in this situation, but neither do I want anyone else in the atari music scene to find themselves in the same situation. I certainly wish someone had warned me off before this all happened. But I was blinded by the desire to keep using my atari gear for my audio recording work, something that now looks like a huge mistake. I guess the one thing I can be blamed for is not realizing something that was "Too good to be true" was exactly that!

Hi there,

If you can't use an editor then you'll need to write
the code yourself likely. You wont find an off the
shelf program to do this. You could try programmers
heaven or some of the other programming sites and midi
related sites to get the background to write your own
program for this. The easiest approach might be to
create a program to combine the 2 midi files you wish
to use. What you'll likely end up with will look a
lot like a midi editor.

easy.

convert one MIDI file to a type 0: that is all the info is in one track.

Do the same to the other MIDI file.

Then when you import it into your sequencer, have them on seperate tracks.

Then you can control the volume of each track globally (hopefully) and you
get your desired result

what sequencer are you using?(don't know what J2ME is :-) Most sequencers have the ability to import a MIDI file, so thats all there is to it :-) It should go to one track. I have heard of some people loading up a song per track, then simply mute and play which ones they want for a whole set. (or you could SOLO each track as well.)

379. Atari ST Internal IDE Interface POLL

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-10-06 05:55:58 UTC
From: brokensystems1986
Topic: 379 Message: 379

Saw this posted in a forum thought I would post it hear.

I recently have noticed a renewed interest in a Atari ST IDE interface. What Im looking for is who would be interested in purchasing a IDE Interface for their Atari ST.

Questions:

1) Which ST (i.e. STF, STE,Mega, or STFM) would you be installing the interface in?
2) Do you have TOS 2.06 or would you also need a TOS upgrade?
3) Would you install the interface yourself or need someone to install it?
4) Would you install inside the ST case or external?
5) Would you be willing to pay a deposit far a interface?
6) Where are you located?
7) How many would you order?
8) How is the price of $120 US Dollars shipping included in the USA?
9) Would you need Hard drive software?

The STE version simply plugs into most STEs.

If you feel this is something that you need or interested in please answer the above questions.

You can email me or post your answers here for all to read.

Hi there,

I'm just posting my responses after each question.

--- brokensystems1986 <brokensystems1986@...>
wrote:

Saw this posted in a forum thought I would post it
hear.

I recently have noticed a renewed interest in a Atari
ST IDE
interface. What Im looking for is who would be
interested in
purchasing a IDE Interface for their Atari ST.

Questions:

1) Which ST (i.e. STF, STE,Mega, or STFM) would you be
installing the interface in?

Well I've got several candidates:
a) 4160STe (Tos 1.62)
b) 520ST (tos 1.4, 4meg simm upgrade)
c) 520ST (Tos 2.6, 2.5meg ram uprade)
d) TT030 (T0S 3.6 4meg ST ram, 16meg TTram, CaTTamaran
acellerator)

2) Do you have TOS 2.06 or would you also need a TOS
upgrade?

well I probably would on 2 of the machines, These are
still available from best electronics and probably
others too.

3) Would you install the interface yourself or need
someone to install it?

Being as my education and recent work experience plus
several years of amateur radio I can install it
myself.

4) Would you install inside the ST case or external?

For me external would be good, many st have not much
room inside and being able to mount the upgrade in an

external case would be good. Especially if we were
able to use some of the cases made for the tiny itx
motherboards pc's have available.
5) Would you be willing to pay a deposit far a
interface?

Yes.

6) Where are you located?

Ontario, Canada

7) How many would you order?

As many as 4 or 5 but probably 1 or 2 at a time

8) How is the price of $120 US Dollars shipping
included in the USA?

Despite low production run parts & boards being more
costly its a bit expensive, but survivable

9) Would you need Hard drive software?

Well perhaps HDdriver would be a good option since it
can use other ide interfaces already.

If you feel this is something that you need or
interested in please answer the above questions.

Something important to me personally is will any
warranty be offered? As some readers of this list will
remember I complained recently about another vendor
who sold me a piece of hardware (& software) that
didnt work as advertised. I won't repeat the gory
details again but it pointed out to me at least that
warrany and technical support is important.

bfn,
James

Hi Mark,
there are profiles for the DMP7 in Uniman, and I think others which
I can't remember at the moment (aargghhh). Look under the Yamaha
files in Genedit and Genpatch, and you might find them there .

Hope that this helps,

David.

383. "SUPERVISOR: Data-Error" or "Bad Memory Structure" while running Cubase 2.0

My Atari doesn´t work anymore under Cubase 2.0.
Has somebody experience with the following error codes?

"SUPERVISOR: Data-Error!

Bad Memory Structure

Track removed!"

IS there a problem inside Cubase or is something damaged in the
computers hardware?

385. Re: Atari ST Internal IDE Interface POLL

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-10-12 04:05:30 UTC
From: brokensystems1986
Topic: 379 Message: 385

James,

The adapter is for the ST line of computers. There are 2 versions 1 for the STE and one for the STF and FM. The FM requires soldering and the STE is a plugs into the CPU socket. The TT is not supported by this adapter.

The TOS upgrade would only be needed if you would like to boot from the hard drive. But most likely would be included in the purchase of each adapter.

The adapter does fit into the the case without any problems and if you use a 2.5" harddrive you can mount the drive in the case.

The cost is due to the low number of boards that would be made and the mounting of chips. Some of the chips are SMT and I can not mount them.

The interface will come with Atari hard drive software but, some people may pefer HD Driver software. I will talk to the owner if there is a demand.

The interface has previously been sold Atari users and I myself have owned the adapter. It is a high quality adapter and works great. Since the warranty would be up to me, one would be included. I would stand behind each adapter 100% just as the original developer did.

Hope thisa answers all your questions.

Please feel free to email me with anymore.

394. newbie needs help with midi through STeem

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-10-29 14:54:16 UTC
From: feebmcdweeb
Topic: 394 Message: 394

I'm trying to get KCS Omega to work through STeem with my Soundblaster Live Value, but I'm not hearing anything when I play back a file. I'm very new to computer recording, but I'm sure my system is working ok because I can get Cubase to play midi notes through my audio card using the Microsoft Wavetable Synth.

In STeem, the midi ports section is set to connect to "midi device", the output device is "Microsoft GS Wavetable SW Synth", and the input device is "SB Live MIDI UART". Does anybody know what I'm doing wrong, or can anybody recommend other midi software that I should use with STeem to test it, just in case I don't have KCS Omega set up correctly?

Thanks in advance!

Hi Tim,

You can change the posting rules (in the group Management section) by
setting moderation for new members. This way the spammers can be
filtered and booted and legitimate posters can post freely after their
first post is approved.

Cheers!

Ken

Hi Ken

I do this for the Atari-MIDI grp..which is the main forum as this grp is
really only for archiving purposes. Its a full time job to moderate new
commers, so i would rather not do it here. Its not that critical for this
list as the other list is however, as thats where the beef of the dicussions
are. If you want to post and get in on Atari-MIDI discussions, Atari-MIDI (
not Atari-MIDI Archive) is the place. You only join here if you want access
to the archives.

yes...as soon as I start moderating membership, the spammers go away!
For this group, (Atari-MIDI Archive) you could have the option for WEB ONLY
so you don't get junk in your mail box. Just an idea.

412. MidiPlexer (Hybrid Arts)

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-11-14 16:55:47 UTC
From: gregor_malecha
Topic: 412 Message: 412

Can anyone help me in finding a MidiPlexer (Hybrid Arts) so that I can expand the MIDI ports on my Atari STE, working with Hybrid Arts SMPTE-Track ?

As I now begin to work with an Axon NGC77SB guitar synth, which uses up to 16 MIDI channels for itself, the MidiPlexer would be the tool to allow me the full integration into my existing MIDI recording setup with Hybrid Arts SMPTE-Track (MIDI-Track) and the other synths etc.

Or - does anyone know of an alternative way to accomplish this task ?

Help is appreciated,

Greg

From: gregor_malecha
Topic: 412 Message: 417

Hi Charles,

thanks for your input and the ebay link, I found what you meant, but unfortunately that's not the MidiPlexer (multiplier of MIDI channels) but the SmpteTrack sequencer software together with its SMPTE timecode sync-box. That's what I'm using already for 17 years.

So I'm still searching for the MidiPlexer !

Any further suggestions are welcome.

Greg

(btw that auction ends 16-Nov-04 21:00:00 EST, 38 hours from now)

Is the MidiPlexer the same as the C-Lab Export?
Additional MIDI-Outports via the serial Port?
there are the schematics of it on the web so you
can build your own (I did it already).

Otherwise:
You can get a MidiPLexer from here for 25USD:
http://www.midiguy.com/shwrm/bargain.html

Ciao

Hi Peter & everybody else,

Serial port = Modem Port (RS-232)?

The RS-232 port is already occupied by the SmpteTrack Sync Box.

(at the moment one of these Sync Boxes is displayed at
http://cgi.ebay.ca/ws/eBayISAPI.dll?
ViewItem&rd=1&item=5137954765&ssPageName=STRK:MEWA:IT)
(but mine looks much better)

Since I've never seen the MidiPlexer I don't know how it gets hooked
up but it must be leaving the RS-232 port free for the Sync Box.
(Or they made some sort of through-wiring. Maybe one of the other
Atarians here knows/uses this?)

The SmpteTrack Software is in any case designed to support the
MidiPLexer, about other MidiMultipliers - who knows.

I followed your link (midiguy.com) but I had come across that site
already before and had ignored it then since it states "Updated
7/1/03" and I saw that they have a newer page "12/7/03" where it's
not listed anymore. But anyway - now I wrote them an e-mail, who
knows...

But so far - still searching...

Thanks,
Greg

Hi

yes serial port usually mean modem port. It only gets
confusing on TT030, Mega STe (and clones) since they
have multiple serial ports.

:-(

> But so far - still searching...

What about your cartridge port? Is it used?
Otherwise you could the Steinberg Midex Plus that offers 4 midi
outs an 2 midi ins and also SMPTE...

http://www.shell.linux.se/adma/studio/midex.php

But I don' tknow if it is supported by every sequencer or only by cubase.
I have one but still haven't used it...

423. Re: MidiPlexer (Hybrid Arts)

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-11-16 15:00:10 UTC
From: gregor_malecha
Topic: 412 Message: 423

Hi everybody & thanks for input

What I found out meanwhile is:

The MidiPlexer is using the HardDisk port with a through-configuration.

Quoting http://www.notator.org/cgi-bin/notator/getmessage.cgi?month=200109&msg=109 :

"On the rear is a cable marked DMA In and on the other end of this cable is a 19 Pin male DMA plug. There is also a port marked DMA Out which is a 19 pin female type connector."

(Reply to JAMES M. ALEXANDER: I'm using an STe not Mega STe, only 1 modem out)

(Reply to Peter Ullrich: midiguy.com replied - no more MidiPlexer available.
Steinberg Midex+ doesn't look suitable without the supporting Steinberg software. How should the ROM port know anything which is adressed to the HardDisk port?)

So - still searching...

(I'll also post my initial message in the atari-midi group to reach more Atarians)

simple answer - do what i have done - build a top-spec pentium 4 pc for ?600, altho its probably cheaper in yank-land, and buy the wonderous device that i use, callled a USB MIDIMAN MIDISPORT 4X4 - this gives you 4 ins and 4 outs, my mate has the 8X8 one - man it costs ?40 for the 4X4 (thats $72) which is bugger all for making all my synths attach and work ! by the way - the ACCESS VIRUS KC is the BEST synth i have EVER USED MAN !

I do still use my atari, but Logic on the PC is DON ! (it was notator on the atari)

l8z dudes !

Subject: Re: Re: MidiPlexer (Hybrid Arts)

simple answer #2

I synced two Ataris, both running Smptetrack, and had my 32 outputs. No stopping there.
I've synced my Mac and PC's too.
Used the Atari synced with Acid, Digital Performer, Cakewalk, etc.

There may be some situations where you really need more than 16 outs from one Atari, but this covers my needs.

Bill

I don't know but maybe it works the other direction. Maybe your
sequencer and smpte software can work with the Steinberg Midex Driver?!?

428. Re: MidiPlexer (Hybrid Arts) - Found One - Thanks!

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-11-19 21:15:31 UTC
From: gregor_malecha
Topic: 412 Message: 428

Hi guys,

finally I did find somebody selling a MidiPlexer! And that's after all the easiest solution. (But let it first arrive...)

Thanks to you for going along with me with all your ideas and help.

Now to the last 3 mails that I hadn't answered yet:

To Bill: The idea of syncing 2 Ataris I liked, you had a good spark with this one. I'm about to do this with Atari -> PC too.

To Peter Ullrich: Your last idea I'm not sure I understood rightly. Wasn't what you suggested pretty similar to what I had doubted in my remark quoted by you? I don't think the Steinberg driver would understand SmpteTrack language, which addresses the HardDisk port. Sure it would need experimenting to find out, or someone who knows the inner workings of these two programs. But thank you for putting your energy & ideas into it.

To jez: Once I have the spare £600 + whatever comes on top to make it go round I might go for it. For now I go with £14 and the MidiPlexer, that will do the job for the moment. And that's what I was looking for in the first place.

Thanks again & bye,

Greg

429. MidiPlexer - anyone has one for sale?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2004-12-16 11:37:31 UTC
From: gregor_malecha
Topic: 429 Message: 429

Hi folks,

a few weeks ago already I tried here on atari-midi and on atari-midi-archives to find a Hybrid Arts MidiPlexer. Then I thought I'd found one and called off the search, but eventually this guy let me down and now I'm back to square zero.

If anyone knows about, or has one for sale, please drop me a line.

(I'm not looking for *alternatives* anymore as that would be too much fuddling around trying to get it to work, with a very uncertain outcome.)

The only alternative would be, what was our last consideration here, to build a copy. That would involve getting in touch with Stefan Daystrom for permission and the EPROM binary file, and getting the circuit diagram together.

But for sure I'd prefer simply to find one, set it up and be done with it.

Greg

430. Syx-Files with Atari

Look for a free download called MEX2MID which will do exactly what
you're asking for.
(Sorry can't remember where I got mine from, but it should be on the
Atari Launchpad site)

David.

I take it you are trying to use STEem to run KSC, and then KSC to control your softsynths?

The way I do it, is to first select your MIDI input in STeem as your USB input.The MIDI Output from steem: select a MIDI Yoke channel. Then in your PC seq setup, select the same MidiYoke channel that Steem outputs from.Now whatever you do in KSC will control your softsynths.

There you have it.

One More Time!!!!!

This REALLY WORKS. I started this last month. In one month I just collected $8,658.00 There is more to follow. I've never made this much in one month in my life. Its working for me it can work for you too.

$50,000 Cash AND Your Own Private Safelist of Real Persons

Make Money Now **This Really Works (just read) **

$50,000 in one month. Direct to you. PLUS You Create Your Very Own Private Safelist of Real Persons for You Alone to Use.

I have been on the internet for 10 years now and have received in my e-mail many many times letters referring to making money and like most of you have ignored them - anyway a few weeks ago I decided to see what happened as an experiment as I had heard quite good reports about this scheme over the last few years.

A little while back, I was browsing through newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial envestment of $12.00! So I thought, "Yeah right, this must be a scam", but like most of us I was curious, so I kept reading.

Anyway, it said that you send $2.00 to each of the 6 names and addresses stated in the article. You then place your own name and address in the bottom of the list at number 6, and post the article in at 100 newsgroups. (There are hundreds of thousands) No catch, that was it. So after thinking it over, and talking to a few people first, (especially the legal issue), I thought about trying it. I figured, "What have I got lose except 6 stamps and $12.00, right?" Then I invested the measly $12.00. Well GUESS WHAT!? ...Within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in. In my first week, I made about $70.00. By the end of the second week I made a total of over $1000.00! In the third week, I had over $10.000.00 and it's still growing. This is now my fourth week, I have made a total of just over $42.000.00, and it's still coming in rapidly. Let me tell you how this works and most importantly, WHY it works.

Firstly, make sure you print a copy this article NOW, so you can get the information off as you need. I promise you that if you follow the directions exactly, that you will start making more than you thought possible by doing something so easy! Read this entire message carefully! (Print it out or download it.) Follow the simple

directions and watch the money come! It's easy. IMPORTANT: This is not a rip-off, it is not indecent, it is completely LEGAL, and it is 99% no risk - it really works! If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE: Follow these directions EXACTLY, and $50.000.00 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success by carefully adhering to the instructions. You will now become part of the Mail Order business. In this business, your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay for quality lists. However, the money made from Mailing Lists is secondary to the income which is made from people like you and me asking to included in that list. Here are the 3 easy steps to success:

STEP ONE: Get 6 separate pieces of paper and write your name and address *(And Current Email Address)*plus the following on each peice of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 12 US$ and place TWO inside EACH of the 6 pieces of paper so the $2.00 will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the envelopes and seal them. You whould now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and two $1.00. What you are doing is creating a service and you are paying for it! Like most of us I was sceptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office 1-800-725-2161 and they confirmed that it was indeed legal. Mail the 6 envelopes to the following adresses:

1. R.C. Falk / 7509 NE Van Mall Dr. C-13 / Vancouver / Washington / 98662 / U.S.A.
2. Zack Longley / 7626 Callaghan Rd. Appt. 3304 /San Antonio/ Texas/ 78229/ U.S.A.
3. I. Foxx / general delivery / Gilbert West Virginia / 25621 / USA
4. Mildred Alice / 112 Corbridge Court / Goodlettsville / Tennessee / 37072 / USA
5. DNF / P.O. Box 1901 / Goodlettsville / Tennessee / 37070 / U.S.A.
6. Thomas C. Nichols / 374 Hollywood Avenue / Rochester / New York / 14618 / USA

STEP TWO: Now take the #1 name off the list that you see above, move the other names up 6 becomes 5, 5 becomes 4, etc., and Add YOUR NAME as number 6 on the list.

STEP THREE: Change anything you need to, but try to keep this article as close to the original as possible. Now, post this amended article to at least 100 newsgroups. (There are close to 450,000 groups on Yahoo Groups alone). All you need is 100, but remember, the more you post, the more money YOU make! You won't get very much

unless you post like crazy!

This is perfectly legal! If you have any doubts, refer to
Title 18 Sec. 1302 & 1341 of the Internatational Postal Lottery Act.
Keep a copy of these steps for yourself and, whenever you need money,
you can use it again, and again. PLEASE REMEMBER that this program
remains successful because of the honesty and integrity of the
participants and by their carefully adhering to the directions. Look
at it this way. If you are of integrity, the program will continue
and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to
you, either on a computer or hard copy and keep the notes people send
you. This VERIFIES that you are truly providing a service. (Also, it
might be a good idea to wrap the $1 in dark paper to reduce the risk
of mail theft.) So, as each post is downloaded and directions
carefully followed, six members will be reimbursed for their
participation as a List Developer with two dollars each. Your name
will move up the list geometrically so that when your name reaches
the #1 position you will be receiving tens of thousands of dollars in
CASH!!! What an opportunity for only $12.00 ($2.00 for each of the
six listed above) Send it now, add your name to the list and your're
in business!

NOTE: Send only US dollars in this program as the US dollar
always has a stable xchange rate and is easily available to peoples
outside the US.If you live outside the US then please exchange local
currency int 12 US$. Exchanging money int $ is cheap, easy and can be
done at most banks, post offices, embassies even super markets. It
will all be worth it when you start receiving thousands of dollars in
the mail. Also letters to places other than your own country, it is a
good idea to send them air-mail not by land, there is not a lot of
difference in price for this.

**********POSTING TO NEWSGROUPS**********

STEP ONE: You do not need to type this entire letter to do
your own posting. Simply put your cursor at the beginning of this
letter, drag your cursor to the bottom of this document, and
select 'copy' from the edit menu. Open a blank 'notepad file' and
place the cursor at the top of the document then select 'paste' from
the edit menu. Then delete the first name #1, make the second name #1
etc., then add your name and address to #6, then save the file as
a .txt file, so you have the file to go back to.

STEP TWO: Using Netscape or Internet Explorer try searching
for various newsgroups (on-line forums, message boards,chat sites,
discussion boards, etc.) One of the largest newsgroups can be found
at Yahoo Groups (http://groups.yahoo.com) and ListBot at
(http://listbot.com). Also if you use Outlook Express and Netscape
Messenger you will have access to hundreds of thousands of newsgroups
worldwide. Visit these newsgroups, guestbooks, message boards etc.,

and post this article as a new message by highlighting the text of this letter selecting 'paste' from the edit menu. Fill in the subject header, try and think of something that a curious person cant resist from checking, that's it keep posting in the newsgroups, a matter of seconds. There is a faster way. If you use Microsoft Outlook or Outlook Express to select newsgroups rapidly. You only need a one time, 'Copy and Paste' to send to all of them automatically.

******REMEMBER, THE MORE NEWSGROUPS YOU POST, THE MORE YOU GET*******

You have to post a minimum of 100** and thats it!! You will start receiving money from around the world in a matter of days! You may want to rent a P.O. Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postal service will deliver it.
Get all your work colleagues or schoolfriends involved. Talk it over with all your friends or simply post it to everyone in your email address book.

Here are some useful links, but remember there are thousands more:

Yahoo Groups http://groups.yahoo.com
Smartgroups http://smartgroups.com
Yahoo Clubs http://clubs.yahoo.com
Listbot Http://www.listbot.com
MSN Communities http://communities.msn.com
Bravenet Forums http://www.bravenet.com
Ezboard http://www.ezboard.com

REMEMBER: This program relies on the honesty and integrity of the people involved we are in a WIN WIN situation, basically what we are doing is helping each other get enough money to afford those basic things we desperately want, with a lot more extra.

So you have posted this message on at least 100 newsgroups, you get 5 responds to begin with. Each of the 5 persons sent you $2.00. These 5 people now make the MINIMUM 100 postings, each with your name at #5 and 5 persons respond to each of the original 5, that is another $50.00 for you, now those 25 each make 100 MINIMUM postings with your name at #4 and only 5 replies each, this will bring in an additional $1250.00 and you can see it just goes on and on and on.

Good Luck everybody this works, I am sorry I have been a sceptic for all these years and now I am kicking myself for ignoring those e-mails, by now I could have been very very wealthy.

$12.00/U.S. Currency / 6 envelopes + postage / and a little bit of time to collect $50,000 in a month.

You should collect $50,000 soon and have your own Private Real Safelist of Persons to send other Advertisements.

446. Idea: Tribute to Bob Moog CD?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2005-08-23 06:37:34 UTC
From: (no author)
Topic: 443 Message: 446

Hallo from Austria!

As we all are very sad about Bobs death and we are thinking of
installing something that lasts forever beside our memories about Bob
I thought of another idea beside the ANSI-fication of "moog":

What about a "Tribute to Bob Moog" CD?

Every interested member of SDIY and maybe other groups could make one song
with at least one Moog synthesizer beeing used for this song.
Someone with studio experience could master them and we could sell this
cdrom per private website or maybe if a record company would be interested
via this company.

In this way we can show that his synthesizers are still in use, whenever we use
them we can think of him and we could form our feelings (sadness, gratitude,...)
into music.

What do you all think about that idea?

Ciao
Peter

PS: As I sold my one and only moog synthesizer the Moog Sonic six about 15 years
ago I am not allowed to contribute :-(But I would be very interested what the
result of such a project would be!

Hi Peter,

It's a fine idea. I've never owned a Moog synth, so couldn't contribute either; although you could argue that his work affected all synthesized music, so really, if the spirit is there, it doesn't ultimately matter if it's recorded on a Moog synth or not...

If I'm barred from the disc, put me on the list for a copy of the final thing.

Regards
4ndy

Hi Juergen!

Juergen Haible wrote on the sdiy-list:
> If Moog _clones_ are allowed, count me in!

For me this would be no problem.
I would even go one step further and would also count the different
Moog software imitations/clones like the Moog Arturia, Model-E,...
Because all of these programs were inspired by Bobs concepts...

Maybe a double cd could be a solution that could be accepted by moog purists.
One cd only with original moog synthesizers used and the second cd
with DIY clones, software clones/imitations.

> I must say that Bob Moog even inspired me in his late years,

Hi Ullrich!

Why spending so much Watts in emulating MOOG with PC´s??

The real thing needs much lesser power.

300 and more WATTs for a sluggish sound?

Best Regards,

Daniel Mandic

>
>300 and more WATTs for a sluggish sound?

The question is: where to get a Moog for a reasonable price...
The power factor could be cheaper than the price for a Moog...

And also the "good or not so good" (I don't want to start a discussion war
if only the hardware Moogs count as synthesizer...) emulations are not a real
Moog synthesizer they have other advantages like patch storage, fast patch
changing,...
Beeing more portable than a Moog Modular,...

Topic: 452 Message: 452

Hi
Wondering if any one can help and advise me on my TX81z.
I am using Tx81z a brillent unit and would like to save all my sounds.
I have not worked on them before so Iam wondering if I can save and
load my sounds direct to my computer and also I note that it is an
8pin din plug at the back my unit.
To make up this cable can anybody advise me on the wiring connection
from 8pin to the 2 leads
Any help would be grateful

From: Mark Wynkoop
Topic: 452 Message: 453

The 8 pin plug is an audio adaptor to analog tape
recorders. Do not use this with your ST.

The midi cables on the TX81Z are identical to your ST,
and the unit should be interfaced with standard 5 pin
din midi cables. You can ignore the 8 pin interface
entirely.

If you are using an ST emmulator for PC, you will need
a MIDI interface for your PC, such as the UNO usb
interface:

Topic: 452 Message: 454

Hi Peter,

after Mark has now explained the hardware side I want to add:

If you're using PC & STEEM your PC's soundcard might have already a MIDI interface in the joystick port. With the appropriate cable/adapter you can go MIDI there.

It would be easier for us to answer you if we knew what kind of computer & software you're using.

Concerning the software side, assuming you do it the Atari (or STEEM) way, the software I could recommend is GenPatch ST. It has already configurations set up for the TX81Z.

You can download it from Tim's website via
http://tamw.atari-users.net/codehead.htm

Hi,
I've just joined and dont know anything about atari software and steem
and wonder if anyone can help.
I use windows xp and have steem running ok. I've been trying protrack
and cubase lite. Although they run ok and play the songs that come
with them, there is no sound. Can anyone advise how to get sound.
Also when using the record function on these, is it possible to input
from the computer keyboard. Any help/advice appreciated.
thanks.

456. RE: [atari-midi-archives] help sound in steem

From: Gotteri, Andrew R
Topic: 455 Message: 456

Hi & welcome,

First, I would check that STEem is talking to your MIDI soundcard:
In STEem, click on the spanner icon (options) and check the
settings in the SOUND tab & in the PORTS tab.

If that doesn't work, can you be more specific about the problem. Is it
MIDI or sample playback that you can't hear? Is the normal PC sound ok?
Is your external MIDI sound device attached properly?

Check the settings & let us know if it works.

Good luck.
regards
4ndy

Mark :
Thanks for your reply .
Are you saying that I can connect a 5 din cable direct from the back of my Tx81z to my computer. I have a 5din lead with 2 mono plugs at the other end.
1. Will this lead do?
2. Where will i plug the 5din lead at the back of my tx81?(in,out or through)
3. If I get a UNO usb will this solve my problems?

I am using a lap top with windows 98 and I also have a coputer at home with windows 2000xp

I am a little bit green when it comes to older computer language.
I started with windows 95.
Any other drawings or information very much welcome.
PS. I have my tx81z only in the past twelve months a brillent unit.
I am in the process of getting another one so this is why I am so interested in puting the same sounds on to the second one.

460. Re: [atari-midi-archives] Re: tx81z help wanted

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2005-09-08 21:01:55 UTC
From: Mark Wynkoop
Topic: 452 Message: 460

Aha, we are making the classic mistake of MIDI versus Audio. You actually need 2 different types connections to use a midi module like the TX81Z. Allow me to answer your questions in more-or-less reverse order:

There are PC-based midi sysex dump utilities, but Atari's OS is a good choice for running TX81Z software, as the best TX81Z patch editors and librarians were made for Atari TOS, and many banks of sounds are available only in Atari formats. Plus you can use DX droid and MIDImouse and the vasious organic composers. The Atari ST has TONS more to offer than just music, but this will be a great way to learn the Atari GEM operating system (TOS).

I'm sure you know some of this, but here is the detailed info for others that need the whole thing:

You need TWO different types connections to use a midi module:

Connection 1: MIDI
You will need a 5 pin Din MIDI signal to make any noise at all with the TX81Z. MIDI sends and receives the note on/off commands, but produces NO AUDIO SIGNAL whatsoever. A midi keyboard attached to the TX is one example of a midi connection (it "sends the note events" the TX plays). Another example is connecting the MIDI IN of the Atari ST to the MIDI OUT of the TX81Z, and vice versa (requires 2 midi cables). If you are not using an Atari ST with it's built-in midi capabilities, you will need to obtain one of the computer-to-midi interface cables which were discussed in previous messages.

Connection 2: Audio
To listen to the sounds the TX81Z produces as a result of midi, you need to make a separate connection using regular audio cables to some sort of amplifier/speaker setup (examples are a guitar amp, a home stereo, or into a PC soundcard).
On the TX81Z, Audio I and II are the left and right stereo outputs. You would only use outputs III and IV in a multi-timbral recording studio setup (which you may wish to do eventually).

All of these audio outputs are 1/4 inch mono plugs. You will need to convert them to RCA jacks to listen to the TX81Z through an input on your stereo (Radio shack part number 42-2373-you'll need two of these cables). To connect the TX81Z to the audio input of a PC soundcard, you'll need to convert the two 1/4 inch mono plugs to a single 1/8 inch stereo (Radio shack part numbers 42-2551 and 274-320 used together).

You may wish to put an FX box such as reverb or chorus between the TX81Z and your computer or stereo. Audio DSP is one of the main differences between TX81Z-era synths and contemporary ones. A small $70 box like the Alesis Nanoverb or the ART FX1 will make your synth sound like a million bucks. Alternately, a PC based sequencer like Cubase or Sonar will allow you to run VST reverb/chorus effects inside the computer.

Do not use your 5 pin din cable with mono plugs. It was some kind of demodulator connection, probably for a tape transfer. Even if you had the correct tape interface for the TX81z, you will never use it in the modern era. Trust me, I have spooled hundreds of hours of data from cassette tapes. Older Atari computers used this data scheme. Good riddance to that technology. Your MIDI connection allows you to do the same bulk dumps in seconds with no modulation or crummy cassette defects in between.

The uno USB connection (or any USB device) is easier to install than a gameport midi yolk (you won't have a gamport on a laptop anyway). It will configure itself automatically with it's own software driver disc. A Midi yolk is slightly cheaper, but can be tricky to configure. Has anyone on the list used STeam with a USB midi interface? Does it work okay?

Hope this covers all your questions.

Hi Peter,

for sure, because you're putting your questions in the Atari group, you're getting many Atari related answers. (And that's not so bad.)

But if for the time being your main interest is simply to dump & exchange TX81Z data, then some Windows applications can do this simple task without requiring you to going into the Atari world.

For the PC there is a small application called MIDI-OX with which you can receive, store, send MIDI data & SysEx dumps. That's a great little tool for this and many other tasks.
http://www.midiox.com/

Later, once your MIDI setup gets more complex you might need "MIDI Yoke" to do routings for the MIDI data. (Also if you're going to use the Atari emulator STEEM.) You'll find that on the same website.

But first you'll need to get your hardware connection together.

Little story by the way:
When I did the first MIDI setup for my PC it was a lot of work and took me a long time. Also because I tried to just solder my MIDI interface cable for the game port of my soundcard. I got all the pinout infos from the www and soldered it perfectly together and nothing worked. Until I gave up and finally bought the cable. Then I found out what was nowhere mentioned: in this adapter cable there were optocouplers built in. Without these - no way. That's the tough way of learning things.

462. Korg EX8000

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2005-09-09 19:17:38 UTC
From: Lawrence Walker
Topic: 462 Message: 462

I have a Korg EX8000(no keyboard) rackmount DW8000 that I picked up in a thrift store and have been trying to ressurect for some time. I'm basicly synth-illiterate but used Ataris for years. I deduced the battery was dead and did the battery replacement mod from Bryan Resslers site;
http://www.pallium.com/bryan/dw8000.php

Downloaded the DW8000 manual and A.Ruggeri's DW editor/librarian, a PC program later.
http://www.anthonyruggeri.com/web2001/dw8000.asp

On the frontpiece of the EX just below the tuning knob there is a button labelled A4. It emits sounds thru my earphones, mostly decaying whistles when I play with the program and parameter knobs..

I have a Mega-4 ST and also a Tweety board. I had no luck with numerous old ST programs getting patch-banks into my EX, altho I was able to lite up the Midi connection indicator with one of them. Since the Korgs memory was now blank I couldn't do much.

I finally got a PC game-port midi adaptor (the people at the local music-store here in the boonies looked blank when I asked if they had one) and am trying to use my W98-SE PC to use the DW-8000 editor to download the memory banks. I also have Midi-Ox installed. Somehow Midi-Ox did transfer a stub to the editor program but won't connect to the EX. I have the midi cables connected to the in out ports but the midi panel indicator doesn't light up and there is no response. Anyone have any ideas ? Sorry if it's PC specific but I do want to use my Atari programs once I get this beast functioning. Of course it's complicated by not having a musical keyboard.

Lawrence

From: gregor_malecha
Topic: 462 Message: 463

Hi Lawrence,

I remember you were struggling with this machine already in January, when you posted messages in the atari-midi group.

It looks like there are many possible sources for troubleshooting to be excluded one by one.

I don't know the Korg DW8000/EX8000 but the question arises: May it be that the unit is damaged?

Could/can you try it in other environments (since you don't have a keyboard an Atari Sequencer with any stupid little sequence on all MIDI channels -> EX8000 -> amp) with any success?

Concerning the battery replacement & the "empty" memory: Wouldn't it just revert to a factory default memory setting? I don't believe these machines just go completely blank (just an assumption).

Did you try a manual dump and did you receive anything in the Mega-4 ST (trying to get patch-banks
OUT OF your EX8000)? (SOMETHING should be coming out of it.)

Unless this (EX <-> Atari) is successfull no need to try the new PC connections - OR - :

Do you have another MIDI unit, which you can use to verify the MIDI signal flow in your setups without involving the EX8000?
(e.g. PC & Atari interacting)

You could, for instance, try, under exclusion of the EX8000, to send any MIDI data (sequencer, midi files, or whatever) between your Mega-4 ST & PC, thus verifying that the signal flow as such between these machines is working correctly.

For the PC you have to make sure that in the Win98 MULTIMEDIA control panel you have set under the MIDI tab the connection to MPU-401 (or similar, what your soundcard offers) and there to EXTERNAL MIDI INSTRUMENT.
Thereafter in MIDI-OX you'll have to select under Options/MIDI devices this MPU-401 as the input & output device.

That's my two cents for now, good luck!
I have to go back now to troublesoot my Axon AX-100SB guitar synthesizer that's giving me a headache, because it's just going completely cuckoo - erratic-erratic-erratic - ooh these machines!!!

Thanks Gregor

I'm still working on this beast. And somehow I don't believe there's an electronics flaw. The battery replacement mod does say that (weirdly enough) it does not have a default configeration but loses its memory. One can reconfigure it either by feeding it the original sound banks by audio tape or midi.

I think you're right however that I might not be giving Midi-Ox the connection. I went into the multimedia folder and changed the Crystal(sound card) out to external device. Perhaps I also have to configure Crystal in to external device. I had expected that Midi Ox would do that for me. Haven't yet had the time to go beyond that, but it seems on the right track.

Also your suggestion of hooking up the PC to the Atari. What however is the passive or controlled media machine. Would a sent message(a .mid tune) be received by any midi player, or would the player machine be the sender. I know that doesn't make sense but that is the depth of my confusion on this. If I "play" a midi tune on one computer does a second computer receive that message and have enough smarts to play it ?

Or more importantly make any sense to these unassigned note off/on msgs. and in what tinber, frequency , frequency changes , wave table.etc. It appears beyond me. And then there are the packages, release, decay, sustain and all the rest.

Of course as you suggest there could be internal electronic faults. Perhaps it awaits the M1 I've thirsted after for 25 years. But then again maybe only one of these new machines can possibly answer the needs I expect and would challenge.

My dream machine would take the notes and instrumentation I've assigned those notes to and play them back to me so that I could adjust my arrangements accordingly. The solos and lead instruments I should be able to add arpeggios, bends, phrasing, and sampling to achieve my final product. From what I've heard the Fairlight at $60k was able to do that 40

years ago but claims are that many much cheaper
machines can do that now. For example to do some of
the Gil Evans charts with different voicings. Maybe
with a Coleman Hawkins or Dizzy lead instead of Miles.

Maybe I should simply forget about getting some old
B3 organ sounds, sell the EX if I can get it
functioning, and my Martin Committee since I no longer
have teeth much less embrochure, and see if there is a
box that can do what I want musicily.

Oh well dreams are what keeps us living.

But thanks for your help.

L

Hi!

Can someone tell me how good does Cubase Atari, importing General MIDI files?

On Windows, I recognized that Cubase is importing much better than any Share- or Freeware!
It sounds more like played, other programs are sounding extremely mechanically (probably the importing of controller data seems to be difficult).

But as I am not really going to BUY (a must) a Cubase for the PC, this is my last outstanding question I would appreciate to know.

Second. Could I use a GM-Device with an Atari Cubase and Play Internet MIDI (famous POP ROCK etc..) files as I would have a Windows with a AWE Soundcard? MT32, Sound Canvas or so??

Second, it will spare place. So I can replace the PC.

Many Thanks.

Best Regards,

Daniel Mandic

P.S.: This Windows 95B is driving me crazy. What a piece of s...!

Hi, Daniel

As far as I can tell from my experience, you can import midi files without any problems in Atari Cubase. It doesn't matter wether they come the PC world or from somewhere else. You should be able to play any midi file that conforms to the GM standard from Atari Cubase to an external GM module. Beware however that some of these files (especially the ones for soundblaster etc) sometimes use a sort of "extended GM". This might mean that some of the instruments are not in the right place (the guitar becomes a piano etc). You can easily remap them in Cubase, off course, but then again the results are sometimes very interesting :-)

Hope this helps

regards
MVB

FIRST A QUESTION TO ALL:
Does anybody have a Korg DW8000/EX8000 default SysEx dump (or any other working memory dump) to e-mail this as *.syx file to Lawrence to help him getting his machine up ?

Hi Lawrence,

The battery
> replacement mod does say that (weirdly enough) it does
> not have a default configeration but loses its memory.
> One can reconfigure it either by feeding it the
> original sound banks by audio tape or midi.

Yep, memory was expensive those days, so it's possible no default banks were kept in ROM.

> ...I went into the
> multimedia folder and changed the Crystal(sound card)
> out to external device.

That's all you have to do there.

> Perhaps I also have to
> configure Crystal in to external device.

That's done with the above. The PC as such is ready to receive MIDI data.

> I had expected that Midi Ox would do that for me.

No, Midi Ox you have to configure yourself under OPTIONS/MIDI DEVICES. There you can connect MidiOx input to receive from your soundcard's Midi In port, and MidiOx output to send to your soundcard's Midi Out port.

If you further set the checkmark to "Pass SysEx" in MidiOx OPTIONS everything received by MidiOx will be passed to the Midi Output as well (=Midi Through)

> ... hooking up the PC to the
> Atari. What however is the passive or controlled media
> machine. Would a sent message(a .mid tune) be received
> by any midi player, or would the player machine be the

> depth of my confusion on this. If I "play" a midi tune
> on one computer does a second computer receive that
> message and have enough smarts to play it ?

Can work either direction, and either way is good enough to check if data flow is happening. (That's what it is about at the moment, just to verify if any stupid little midi byte goes from here to there.)

So if you use MidiOx (which has a Midi player built in, accessible via ACTIONS/Play MIDI...) to play a MIDI file, you need some software on the ATARI to receive it. This can be a sequencer, which you then put in Record mode. There you can see if it receives something.

Or, the other direction, you use a Midi player/sequencer to play a Midi file from the ATARI and you can observe the Midi data arriving in MidiOx's "Monitor" window. For now there's no need to HEAR anything, it's just to see if ANY data are being received either way. Then you'll know the Midi connection as such is established and working.

Once you have the connections/data flow together you can replace the ATARI by the EX8000 and try to send something there and see if it responds in SOME way.

> Or more importantly make any sense to these
> unassigned note off/on msgs. and in what tinber,
> frequency , frequency changes , wave table.etc. It
> appears beyond me. And then there are the packages,
> release, decay, sustain and all the rest.

This will remain abstract until you'll get the connections up & running and thereafter begin to hear something. Then only can you begin to explore these aspects and begin to understand what's what. I hope you've got the manual for the EX8000 to have some guidance to get into the workings of that machine. Otherwise where could you start getting your grips on it??? Besides, since I assume you are entirely new to MIDI, do some search on the www for MIDI tutorials. I believe to have seen some pretty good explanations once in a while. Or get a book about the MIDI basics, that's what I did in the 80's when I started.

> Of course as you suggest there could be internal
> electronic faults. Perhaps it awaits the M1 I've

> one of these new machines can possibly answer the
> needs I expect and would challenge.

This you can only find out once you've got the basic connections together and your understanding of what MIDI can do and what not develops.

> years ago but claims are that many much cheaper
> machines can do that now. For example to do some of
> the Gil Evans charts with different voicings. Maybe
> with a Coleman Hawkins or Dizzy lead instead of Miles.

Same thing - your dream machine, any machine, will need YOU and your capability to handle it as its central part. The better your understanding, the better the machine will serve you.

Also, by the way, there are software synthesizers for the PC nowadays, with which you can do many things. It doesn't necessarily have to be another hardware machine. But a keyboard as such you'll need sooner or later!

Patience, persistence, digging, digging... after all it can be a lot of fun to explore, to get frustrated inbetween, and to eventually succeed, step by step...

Thanks, but I do have the 2 .syx banks as well as other alternative banks, and there are also the 2 64k original banks in .wav format available for entering them (awkwardly) by tape as an alternate method of restoring the memory banks. I seem to have seen somewhere that .syx files are platform independent as well. If so possibly I could enter them with an Atari program, since I did communicate briefly with my Mega and the Korg.

Good, then you can as well use them for verifying your MIDI
conections between PC & Atari.

And alternatively you can send them out of MidiOx to the Korg.

> MVB

Hi Makje!

I had a good deal. For installing a Windows PC, I will get a Cubase 3.5 VST
(Win95(working now :-)
With DOS, Win3.11 or 95 it is very similar to an ATARI MIDI, but not as
well.

For all instances I have it, bez I need this GM Stuff. The Soundcard in the
PC is doing well with Cubase, making half a megabyte, some better, some
terrible GM Sound. But it cannot harmonize with my synths. Too digital :-)
(AWE32, Trash. But good for exotic MIDI files as you mentioned, and perfect
importing with Cubase 3.xx)

My Synthmachines ?get connected to the TT. Midex etc. etc, dreaming.....

Best Regards,

Daniel Mandic

473. Atari ST - Steem

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2005-10-24 12:31:56 UTC
From: jshawken
Topic: 473 Message: 473

Hello, I'm new to the group, but not to Atari ST's. I've owned at least one of every model they produced except the portable at one time or another. My last 1040STe died in storage and I tried to give the rest of my stuff away, but no one wanted it. So, untill I was searching for a Kawai K1 editor and sequencer for the PC that was half as good as the software I used on the ST, I'd left the Atari ST community.

I downloaded STeem yesterday and so far it works great! The only software I kept for the ST was my midi software and music files. My favorite sequencer for performances was Advanced Midisoft Studio because it was easy to set up a bank dump as a .sng file and every directory of my hard drive had a setup.sng file that installed all the patches to my keyboard for the music in that directory. Then while the patches loaded into the keyboard, I could load the first song to be played. Nothing I've found on the PC will play one song while it's loading another. Plus editing the midi data just stinks.

My old K1 is 300 miles away but I'll try it with the emulator in a couple of weeks! I've got so much music that I've not heard in years.

474. Wavestation

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2005-11-27 03:47:27 UTC
From: Daniel Mandic
Topic: 474 Message: 474

Hi NG.

My Wavestation cannot communicate with the PC (Win95). After all, it hung :-(... Now I have to remove the Battery (I hope).... Resetting don?t work any more (Init-RAM). Also the standard MIDI connection is not working without an other synth inbetween. !"?

Now I hope the ATARI fullfills the MIDI Quests, relating the Wavestation, better and I take the Liberty to ask for that matter, if anyone can point me to ATARI related WS?-Stuff. Thanks.

Is it possible to patch the WS with GenEdit, let?s say as good as Sounddiver 3.0? (I would like to make the template myself, so I am just interested if or wether GenEdit is possible or not, to patch the WS fully)

Sounddiver is nice.... but WS and PC are seemingly not working well together... after some Syx?s it hangs totally. Not really a repeatable Error, but errors occur from time to time, and more :-(.

Kind Regards,

Daniel Mandic

Hi Leslie!

I know new things about Wavestation and Computer. The PC cannot work with WS "Keyboard" ROM Ver.2.28, but I have connected the TT a while. Wow.... that?s ATARI MIDI!!!!!!!
And, everything MIDI works now. Forget the poting about win9x. ;-), though I will leave win95 for other purposes and special-cases... A 32bit IBM-PC is always usable for something.

No, I have found a full-featured freeware ST Wavestation editor "Wavelib". The Version, with the number 2.28 points to something ;-) IMO.

Yes, GenEdit will be very interesting. But more for the Korg DSS-1.
I am going to make the templates on my own, so I can study the Hardware meanwhile ;-). I would suggest to any poor technician.

Maybe it?s also possible to build an analogue synthesizer and to controll it fully digital via GenEdit. Would spare much (High-quality potis etc..) money, indeed. The sound is the same, but w/o that good realtime and fine control. The Pros would be easy saving (e.g. knob-position) of any setups etc... digitally.

I hope Joe Hlifka is finishing the special-Music MIDI-CD as soon as possible, erm. I mean the Manual and the CD with other utils and candys. Theoretically is GenEdit already finished, but I would like to have the manual and especially that CD, and I get the possibility into the bargain to honour the/his/her kind work.

< I wish you nice gigs.....

Kind Regards,

Daniel Mandic

Hi,
There's an Atari Wavestation bankloader in the sounds section, and
also look at www.hitsquad.com/smm/atari/PATCH_EDITORS_LIBRARIANS/
which has a Wavestation librarian there.
This may be what you want.
Best wishes,
David.

Dr T

hello mark , well i guess i can take the words out of tims mouth ....no not only doctor T , i did enter this thread half way through.....so i have no idea where it started .... from what i understand is that your searching for a good algo composer....in any case ,LUDWIG,is your direction. it houses most features and functions expected of a "algo-auto-random-variable-compo-tool !!!!!".
hybrids arts is great ...by far!!!! . in addition ludwig allows the user to save file as midi. limitless control over segmented parts then manipulate with counter-actions...

Hy all together,

I am a new member here and hope that someone is able to help me.

Over the years, my Twenty Four Disk got broken.
I still hav the dongle but the disk has gone.

Does someone have the disk and is willing to make a copy for me ?
I think this is not breaking the law, since the program is only
running with the dongle (as far as I recall).

Many thanks in advance
Matthias

Matthias - blimey that is going back a bit!

I have it somewhere, it's not cracked, but you dont need a dongle.

I think at the end of the ST's life i got it free on a magazine coverdisk (STformat?) and i will try and dig it out for you - i will have to zip it up and email it to the atari group ;)

492. Midi event processor???

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2006-05-03 12:14:35 UTC
From: Boris Franck
Topic: 492 Message: 492

Hello,

Does anyone knows of a simple realtime midi event processor for the Atari st? By simple i dont particularly mean easy, i just want to point the difference with sequencing or algorythmic functions (that i don't need).

In my dreams, i imagine something like the "Midi Event Processor" hardware from Midi Solutions, with maybe more flexibility: you should be able to define several "event translations" functions like changing a particular CC to a defined Sysex, or Note to Program Changes, or Sysex to anything other... It should also be able to calculate events with Increment/decrement functions (eg, it sends a program change incremented by one each time i push the same button on my controller), and also define maximum and minimum values in In & Out. Plus some mathematic functions...

The best would be a software like "Building Blocks" for PC (its a modular environment -looks a bit like Audiomulch or Reaktor- that only processes Midi information), but for the Atari. And mor stable, as BB isn't...

I already asked this question here some times ago, was redirected to huge lists of software, but wasn't lucky enough to find something close to my expectations... Maybe such a software doesnt exist for the ST?

Well, i want it so much that i should be able to try to program it myself, though i only have very poor knowledge in programming... Does anyone more experimented could tell me if it's only possible, if it's hard, what programming langage i should use, and where i should look for needed tools and documentation? Basically, it should just analyse incoming midi strings and datas & replace the strings by an (user definable) different string and process the datas with several functions (incr/decr, +, -, /, *, ...)

Of course, if an already existing soft does the job (even if it has other functions i don't need), i would be happy to bypass the programming learning ;)

Any idea?

Talk is cheap. Use Yahoo! Messenger to make PC-to-Phone calls. Great rates starting at 1¢/min.

Boris,

I would suggest looking at Midi View by Jim Johnson. It watches the midi ports and prints out what is coming in. It is written in 'C'. I would use 'C' because it is much faster than BASIC. The source code is included, so you can press buttons on the keyboard and try to follow the source code to see what each button does. You would only have to modify the code to modify the midi codes and send it to Midi out.

I think that you can find 'C' compilers online. Ebay sometimes has a Mark Williams version up for grabs. You may find the software elsewhere, but the support documentation is VERY important, so try and get the entire package.

Rory

I seem to recall there was something. I know MIDI AX by Dr T has a screen
where you can program your own CC sysex mapping stuff....and may be just
what you want. But there may be an easier app too. MIDI AX is on my site BTW

Thank you, I'll check Midi Ax... & eventually will part with C programming.

...Tail a software to my purpose is very tempting, it will probably stay on my to-do list even if MidiAx'll do the main job. If possible, I'll try to make my hypothetical C soft auto-bootable from disk, including all user settings, so it will be usable without monitor. For live applications it'd be a must, & a Mega ST should almost fit on a rackstand =)

Well, for now i'll just say it's to be continued...

From: Mark Wynkoop
Topic: 503 Message: 508

I've had this on some other forums. The consensus seems to be a new type of exploit, but it's entirely possible the originating address has been "spoofed", so the sender may not be responsible or even aware.

it would be a nice service if the admins could simply delete messages related to this, even after the fact.

Thanks, Larry, for that info & link. That's what I had kind of suspected when I looked at the source code of these e-mails. (I don't really understand that much "Javanese" but the script commands looked fairly suggestive.)

Thanks, that solves the riddle.

:^) Greg

Hello Jerry

Yes I remember this too, I think it was a german company that did the magnum upgrades, they had oen for the TT030 to go to 256megs of fastram too. They have been out of production around 5 years or so. I know best electronics has one for Mega St / STe I think that has a 12 meg upgrade.

Since the 68000 can address up to 16 megs and the atari st uses the upper 4 megs for roms I think and perhaps IO (not sure hafta look it up). It shouldnt be out of reach to even design a board that could run off the address lines from 4megs up to 12 and mount some simms. Since I'm into electronics I may be able to figure out how to do it. some details to work out but shouldnt be out of reach.

516. Help - My falcon died

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2006-07-22 17:43:48 UTC
From: Anthony M. Trujillo
Topic: 516 Message: 516

I started up my falcon recently, and it looks as if my hard drive is dead.

Anyone know how to fix this?

If it was a PC, I wouldn't have an issue, but i know little about the
inner workings of atari.

My Falcon HD died as well. However, the HD is a standard LapTop HD, so you could try opening it up, and replacing the HD with a new one. You won't need much space...1 G will even do :-)

However, I have just not got around to replacing mine yet..so I just use discs, as the OS is inside and not dependant on a file system like mac or Windows..so I just have all my apps on 1.4 Discs, and run 'em from disc with no issues.

520. Atari stuff

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2006-08-23 15:14:41 UTC
From: David Wildsmith
Topic: 520 Message: 520

Hey y'all -

A friend of mine recently gave me a bunch of Atari stuff - it's looking for a new home.
Here is a partial list:

Mega ST with mouse and keyboard
mono & colour monitor
Atari/Syquest hard-drive - 44M removable
dozen or so 44M drives
Mac emulation & old Mac software
lots of programming software
some games

When I plugged it all in, it made a clicking sound as though a key was stuck. I unplugged the keyboard and the sound continued.
So there is something wrong with the CPU, but it's probably something minor.

I am in Toronto, Canada. This stuff is at a friend's house in the east end.
I haven't got time to ship this, so pickup only.

David

Hi Charles -

I gave the stuff to a friend for his musically inclined son. When we hooked it up it made that sound.
Now his son's friend has fixed it. So he will probably be keeping the bulk of the system. There will be parts and software that he won't want so let's give him a couple of days to dig through it.

You can email me directly if you wish.
Sorry for getting your hopes up for all that loot!
David

Now then.....

does anyone on here have the complete sound set as a sf2 of the qy10
lol yea i know its a bit far fetched but it was worth a try

also does anyone have

Breakthru 2 i have breakthru 1 but need 2 as it has got better
features

Tim did post it to me about 3 years ago but i have recently moved
and misplaced the disk i burned it too so if tim or anyone can help

it would be much appreciated

Cheers guys and gals of the atari world

long live the speccy ooppps i mean

atari st

530. Anyone know what happened to David Becker

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2006-08-28 01:04:46 UTC
From: James Alexander
Topic: 514 Message: 530

Hi everyone

Anyone know what happened to David Becker? you might remember he wrote a number of PD programs for the ST, like dbwriter and a few mono games. He was quite well known in the late 80's and early 90's but by the mid 90's he'd completely dissapeared from the atari scene. I'm just curious whatever happened to him

Hi Lee,

thanks a lot. In the meantime someone sent me a copy and it works
flawlessly.

Cheers,
Matthias

Now then.....

does anyone on here have the complete sound set as a sf2 of the qy10 lol yea i know its a bit far fetched but it was worth a try

also does anyone have

Breakthru 2 i have breakthru 1 but need 2 as it has got better features

Tim did post it to me about 3 years ago but i have recently moved and misplaced the disk i burned it too so if tim or anyone can help

it would be much appreciated

Cheers guys and gals of the atari world

long live the speccy ooppps i mean

atari st

From: Cray Z Fournotes
Topic: 535 Message: 535

I am not entirely sure what you are after. I have some MIDI files with the QY10 patterns--or are you looking for samples of those 31 cheesy sounds?

yes

The sf2 file is for my Audigy card i have a few sf2's (soundfont files) but use my Atari st as a main controller which controls midi to the audigy and then sends data to another pc to control reason etc.....

very confusing i know

lol

i have looked on the net for one and to no avail

i used to have a qy10 in england but when gm set in i sold it

but i have a lot of songs that use the sounds in a paticular way which cant be simulated with gm sounds weird i know

for example sound 26 the perc comp no general midi sound comes close to that

anyway

thankyou for replying

i am afraid it is my friend i bought it way back in 1993 and in 1991 i bought sequencer 1 from gajits manchester uk i think i am legit my friend been in the atari game tooooo long

i run a full based recording studio and we cant afford to be using cracked or copied software

i asked others to help as a backup purpose

i recently saw a post for steinbergs pro 24 and noone quibbled about that now did they !!!!!!!

538. Cubase history

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2006-08-30 00:16:55 UTC
From: francois skgjhsdkhjg
Topic: 520 Message: 538

Hi Tim,

just a little precision on Cubase history. As you mentioned, the pre-release name for Cubase was Cubit, and I've been told the name was change to Cubase because "Cu" and "bit" are both very bad sexual words in French !

Long life to your site ... and to the Atari.

I no longer own my QY10. Yes, I can understand your frustrations with the General MIDI soundset. But there are plugin synths out there (for PC) that can sythesize any sweep, gurgle, fizzle, pwow, or yyyyyow that you can imagine.

At the same time, I understand the longing for sounds I used to have, even when it is irrational. I had a little Casio keyboard about 15 inches by 3 inches by 1 inch that also had a built in calculator. It had the cheesiest sounds, but sometimes I wish I hadn't yard saled it. They actually used it in a car commercial a couple years ago---oh the memories....so I understand.

Topic: 546 Message: 546

Hi
i just joined this group because I have just started
using 4-0p FM software on a Yamaha FB01 using the
STEEM engine which has mainly worked. However I can't
get the KC10 Spectra editor to start let alone
communicate with the Kawai gear as it is freezing up
when I try to run it

Hi Steve,

mabe you post this offer also in
http://tech.groups.yahoo.com/group/atari-midi/
since there are ~400 members more compared to here.

If the midi files are good, it would really be worthwile if they
could be made available somewhere on the www for browsing/searching
and downloading. Don't you know a webspace where you could make them
available like this?

How many MB is the total of these files?

21,000 midi files - that's incredible! How could you do this?
Since '88 - that's 19 years, that's more than 1,000 files a year, ~3
per day if you had worked each day on them - that's just unimaginable
to me.

:^) Greg

I didn't say I did them all myself- I've traded with others that were on the road... and I used to construct custom MIDIfiles for clients according to the stage gear they were using. 3 a day...
i mean, after 7 or 8 hrs. work it's hard to stop hearing the last finished piece in my head for at least awhile (or a nap) and you've gotta be clear-headed so you can approach the next one with the right attitude... no wonder you couldn't believe it...
I don't know of any site with the storage space to be able to download them all- if you do, please let me know. In the meantime, I can send you a little bit @ a time if you like. I had to store these on DVD- I also have TONS of lyrics in separate text files.

visit my Cubase page on my TAMW site for Cubase lite
You can also find out where to get a dongled Cubase 3 as well.

You can use MIDI out from your Atari to PC IN, and have the sequencer on the
PC locked to external MIDI sync. That should do it

Hi

I don't know about the Logic part, but the Notator part you can go to my forums link and there is a link to the notator grp. At that site is also notator downloads for those that have the dongle. They might have the logic part..its been a while :-)

i love edit track used for 12 years now , want some advice , stay with it , only good results are from endless usage and devotion.

try some stuff your self then private email me ..what exactly do you need help with.

parts for the chains are made from the register in the
middle of the screen , then use the chain from the menu to 'sew' together these parts in any order you wish...

help is never a cry away... advice.too!

583. K3's additive user wave and harmonic partials

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2007-12-20 00:07:24 UTC
From: somethingkillingyou
Topic: 583 Message: 583

Hi there

I'm new here, so here's my first question :)

I got a Kawai K3; you know this old synth has an additive user wave that you can determine by setting 32 harmonic partials 'non zero value' (1-31) choosable between the first 128 harmonic partials (the other 96 harmonics, unused, are 0 value by default)...

of course, I'm using Dr.T's K3edit to have a quick access to it (thank you!)...

I'd like to use it correctly but I've no idea what I'm doing: the problem is that you cannot "see" the shape of the waveform with the program...

is there an application that could help on this. i.e. a software that lets you tweak at least 32 partials out of 128 (the more the better) showing you the wave-shape so that you know what you're doing?

also, starting from some samples and isolating a single complete oscillation of the waveform you wanna reproduce (more or less complex), is it possible to know which harmonic partials have been used and their (approssimative) value?

I have a pc, but I'm using STeem, so softwares of both platforms are welcome...

greetings

Fabio

--- In atari-midi-archives@yahoogroups.com, "somethingkillingyou" <somethingkillingyou@...> wrote:
>Hi Fabio,
I owned a K3, K1 and K5 . The K3 is good for learning the parameters of what a synthesizer does. There is a button for every function. Beyond that softsynths take its place. I gave mine away to someone with small kids, because it great for learning about syntesizer sound making. It is not multi-timberal. Has small number of routings. Very fixed routings and Crow Music has created an instrument sounding exactly like what its gifts were called the Blue crow.;that is virtual. So I can use several different sounding K3. If you know how to think like a programmer, Why keep it? It's outdated. The additive synthesis is explained by using Reaktor. Samplers have developed so far. The help and tutorials to learn things are cheap. I am subscribing to VTC.com for $250 a year and I have access to about 35 different online Audio classes, in addition photoshop, illustrator that it is cheap to become an expert in anything now. So unless you are a newbie or have kids the K3 is not that hot.

that doesn't answer my question at all...

also, I think a real analog filter beats soft-o-crap any time.

Sorry If you want to download caged artist K3 and it has the harmonic series. The K3 will let you pick 32 of the harmonics out of 128. Look at the editor librarians on steem. Most of the K3 sounds are electric piano forms. But I feel the same effect from vst run through a nice speaker system with the eq's adjusted. I use Orion or Sonar. But every program is good and cheap. Especially if you are a student. They offer student discounts. The K3 has a master button and you have to kick that on to adjust the master functions. Run it up into Dr T's Caged Artist K3 or the GenEdit and it should work for you.

I also own Reason and am creating a general midi bank on Subtractor basing many of my ideas off the K3. But their own examples are more weak than the Crow Blue examples which sound so much like a K3 including the chorus parameters along with the LF0 and it's strange shapes.

I learned to program on that instrument. But the sounds can be recreated on subtractor probably pretty easily. With good eq I can have the whole kb shine all the way up the 5 octaves.

On Steem I really had stability issues trying to use the mpe environment. By the time I figured out how they worked. I knew how the modern programs worked. So I switched. They were complicated. But You can make anything.

Have you tried KCS Lvl II That is like a Musical Mathematica. But you might check out Kcs 4.0 but load in level 2 with PVG and Master Editor. Very deep

Lots of Luck

Leighton

hi

actually, I'm trying to use K3edit for the user wave made out of partials, but the fact that you don't know the shape of the waveform is a let down...
graphical rendering of the waveform shape would be vital imho...

about Dr.T's KCS: I never used it; what would be the benefits?
has it got an additive synthesis engine?

greetings

Fabio

Hi everyone

has anyone copies of Digidesign Sound Designer Universal, SoftSynth, TurboSynth?
what about Steinberg Avalon?

happy holydays

Fabio

If I remember right the increment decrement keys are the intensity adjustment for the individual harmonics. You scroll through harmonics and increase their values using inc dec keys. I think the caged artist will show you the shape of your wave. But you can only use 32 harmonics out of 128 for the K3.. The K5 splits it into 2 64 harmonic banks. Have you loaded the caged Artist K3 its on steem and works in both medium and high resolution. I am posative what you want is in that editor librarian. The K3 presets in my opinion don't really shine on what the instrument is capable of expecialy if you run it through an effects unit.
---Remember to put Master on for those parameters to work that way. It is different than edit mode. Do you have the K3 manual?

KCS is close to ableton live? It is 3 kinds of sequencers. Pattern, Linear or SongBlock. but it also has an Artificial Intlligence generator and Craig Anderton wrote the help manual. Where the new programs have gone is with this thing called ACT where on Midi controlling keyboards. My synthesizers automatically map the midi message channels. 7 is volume, 10 is pan 1 is mod 64 sustain and so forth so you are able to adjust these using a potentiometer instead of a mouse. But KCS had what they call an MPE environment. Things kind of got added on to it. Tiger is like the interface of a piano roll. Copyist in Music by music notation and you would individually load each of these sections and they would use KCS as the core sequencer. I put songs by typing them in fast in KCS but most musicians would not find database music writing fun. They would rather step using a mouse. On Dr T's you could assign keys on the typewriter to different fhythm values
and move and insert that way. I did not understand all this when I studied it. I was a newbie. But a lot of people think it's like a pre-band in the box, or groove creator.

To have an idea how waves are generated by harmonics have a look at this fourier Synthese online simulation:

http://www.schulphysik.de/ntnujava/sound/sound.html

Ciao
Peter

good advice, but I was looking for something like this:

http://www.schulphysik.de/java/physlet/applets/synthese.html

...but with 128 partials! here there are only 8...

greetings

Fabio

i really do not know to tell you the truth , k3's are out of my league as i only believe in rolands yamaha akai and sequential circuits....

if i can suggest , why not just use a universal editor , how far are you into this music making any how?

check the instruments supported in the gen edit list....
charles

596. New file uploaded to atari-midi-archives

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2008-01-20 10:23:11 UTC
From: atari-midi-archives@yahoogroups.com
Topic: 1 Message: 596

Hello,

This email message is a notification to let you know that
a file has been uploaded to the Files area of the atari-midi-archives
group.

File : /SOUNDS/Kurzwiel/K_E_DBUG.PRG
Uploaded by : davidetheridge2003 <d.etheridge1@...>
Description : K-Edit finally debugged and working! This Atari program is now available and hopfully should work on PC Atari emulators.

You can access this file at the URL:
http://groups.yahoo.com/group/atari-midi-archives/files/SOUNDS/Kurzwiel/K_E_DBUG.PRG

597. K-edit now finally available!

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2008-01-20 10:30:52 UTC
From: david etheridge
Topic: 597 Message: 597

Hi folks,
it's taken a while, but the Kurzweil 1000/1200 editor from K-edit is now in the files section. Many thanks to George Nakos on the Atari forum for his genius in sorting this out.
Use the debugged version for the program; any other instrument banks are in the accompanying zip of the original, so you can now assemble a complete program for yourselves. Hopefully, it will run okay under STEEM for those who wish to try it out.

Best wishes,

David.

Hi David

Thanks to George and yourself for getting this together. The more the merrier..now..if I only had a Kurzwiel...

BTW: what machines is it suppose to work on? Maybe I can find on second hand at a good price now that this editor is available.

Tim

From: david etheridge
Topic: 597 Message: 600

Hi Tim,
K-edit works with all varieties of K1000 and K1200 keyboards, plus the PX/AX/SX/HX/GX modules. You simply MUST try these guys out. I have 11 of them!! -which seems like overkill but you can chain link more than one of the same type for double, triple and more polyphony.
It puts the Proteus range to shame completely, and the depth and rfange of sounds is truly astonishing. Many of the sounds are still in the current range of Kurzweils so they're unacknowledged classics and built like tanks.
Ebay prices in the US seem to be very low: from $50-250 or thereabouts depending on spec, and all of them are upgradeable with extra sound chips and OS roms. Kurzweil provided a sound library with Objectmover (also in the files section) that has some wonderful patches.
You can get the full info here:

http://launch.groups.yahoo.com/group/K1000-K1200/
-nearly 500 users there!

Best wishes,
David.

Date: 2008-03-07 10:14:38 UTC
From: matt_w_2008
Topic: 605 Message: 605

Greetings All,
I'm trying to get hold of the instruction manual for Cubase v.3.1. Any idea where I might locate one?
Thanks,
Matt

606. OMS OpCode 4

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2008-03-25 01:57:06 UTC
From: SPIKE
Topic: 606 Message: 606

Does software/drivers exist for Atari 1040ST to OMS Opcode 4 Midi-Patch box? My web searches produced lots of Mac software.

607. OMS OpCode Studio 4 MIDI box

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2008-03-28 02:58:55 UTC
From: SPIKE
Topic: 607 Message: 607

I just spoke with Tim Conrady about interfacing a 1040ST with the OMS OpCode Studio 4 MIDI box. He said to check with anyone on this group who does hardware interfacing. Is there anyone who knows this Studio 4's hardware? Most of what I have seen on the web is Mac-related software. I would really like these unit as part of an Atari-based system. It can address up to 128 MIDI devices!

this is great ,
i always welcome dr t stuff , when i had my dx 7
i liked his editor , and now with the tx81z i own ,
i ts nice to find these program to compliment our set -ups...
now
if he would only be a nice guy and release the T-BASIC midi language ,
all would be peachy and calm , but i have to use pascal
oh well
getting results
plus
i have an other program for the
"estate"

charles

THANK YOU DR.T

From: charles
Topic: 611 Message: 611

since we are in the gift giving mood,
thanks davis!!!!!

er uhm david , david right?

i have been working on a librarian for the pss portasound yamaha
keyboard tone units....

small fm
multi channel ,
multi trimbal
synths...

seems like an apropriate time to release , and feel out the group to
find what people can use , can't want, etc etc etc..
i still am looking for others to program with so glad to try
my luck with this...ok please do not carelessly use or give away ,
i worked hard on this item and feel it should beniefit all pss
users..

Hi DavidThanks for this! Although, we do have Fingers in the form of MIDI AX, its not the same as the original Fingers program. I got mine from Trond a long time ago..and it was a copy protected disc. Glad you found one that is'nt :-)For some reason..Fingers reminds me of The Matrix..with all those numbers going down the screen. :-) It looks very cool in color , whch you can adjust the screen colors for some pychodelic musings! OH..if you download the MIDI ax files, I have my Fingers files in there which will run on Fingers too!!Tim**********Tim's Atari Midi World : http://tamw.atari-users.netAtari-Midi Forum:http://www.yahoogroups.com/group/atari-midiHotz Translator Forum: http://groups.yahoo.com/group/midi-translator/ ==========To: atari-midi-archives@yahoogroups.comFrom: d.etheridge1@...: Mon, 14 Apr 2008 15:22:45 +0000Subject: [atari-midi-archives] Fingers now in the files....

616. buffers?midi?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2008-04-24 01:21:03 UTC
From: charles
Topic: 616 Message: 616

i recently have constructed a program for the yamaha pss series keyboard ,
with in the code was a routine to install a larger buffewr for the midi buffer,,,

when i transfered code to pascal i removed this routine and program still works great....

now my question is ?

what are the beniefits from having a larger buffer ?

it made no noticable difference and the program works just the same with or without the buffer.... are there any pros or cons to this issue?

really what does this change buffer size enable me to do?

do any of you use this technique????

charles

i wish i was there to help ,

my first guess is yes the keyboards are interchangable.... ya know i sold an odd keyboard that came with my st mega4 when i bought couple years ago...?

does your keyboard in question have blue letters instead of brown?

i really recall both working,
but the stupid telephone connector that is on both keyboards is its design's
draw back,
make sure its not coming loose all the time...

From: TC
Topic: 623 Message: 623

Bank Dumper (TM)
Software for Atari ST Computer and
Oberheim Xpander Synthesizer
including 1000 Sounds

All rights reserved / copyright 1988 Jacques Isler AG, Zurich

It's not in the files section (unless it is named incorrectly), I've already looked. ;(

(I'm NOT referring to the Matrix.zip file which is the Matrix 1000 editor by Quinsoft, which IS in the files directory)

Actually, I'm only interested in the patches themselves, not the program.

From: PeWe
Topic: 623 Message: 624

It?s not in the files section because it?s not free and copyright as also copy protected,- physically too !!!
If you copy the disk, you have a workdisk, but you need to have the original disk inserted in the floppy drive all the time even you start it from a harddrive. More,- if you start it from a harddrive it won?t find it?s default bank, what it has to, even if you copy this bank to the drive and w/ the original disk not being inserted in the floppy drive.
As I mentioned in the Xpantastic group, the patches are content of this copy protected program and in the programs bank format, not raw sysex,- and not any part of this program disks content is free to copy unless someone finds the creator and/or distributor of this program to get an authorization.
It?s also possible, all the rights of the company went in 3rd party hands after liquidation.

If you want the patches, try to find the Oberheim compact cassette for the Xpander/Matrix 12 which contains these patches.
I think that?s much easier and avoids legal conflicts.

Not all the old software is for free,- have you ever seen Digidesign programs for free if these are not cracks ?

If someone makes evident there is an authorization to upload the content of that copy protected program to files sections of groups, I?d do it as soon I have the time for it.

Hi Mike !

But not any Atari program of Digidesign I have ...

Mike Wolak schrieb:

Actually Protools 3.0.4 and Protools 5.0.1 are free and were distributed by Digidesign.

pewe
i think we got steinberg twenty - four v.3
uploaded,
its copy right ..???
this atari stuff is getting real old,
and cannot be found anywhere.

if somebody has some of this hard to find stuff, email me or put in files sections ,
the atari midi needs no boundries!!!!!!

charles

Specifically, it's for the Oberheim Xpander.
Oberheim made many different synths

I?m pretty sure it is copyright protected, unless it?s on the Steini ftp legacy products server and declared as free.
I know, Avalon is on that server, but only for the guys who have a dongle and need a replacement disk content AFAIK.
In the case of Steini, probably there would be more on the server for download, but they lost the Atari stuff in a fire several years ago.
But maybe you have to differ between products/apps and the code itself eventually.
The Atari products they had in stock are definitely lost but I think the code is still there and I?m pretty sure all belongs to Yamaha now.

Not supporting a computer platform anymore and not selling the products for this platform doesn?t mean they don?t hold the rights.

At least it depends on if someone cares on this or not,- you never know.

Have in mind all the Steini apps need dongles, so if a program runs without a dongle, it?s a crack,- that?s a fact.
Also, it makes no sense to upload dongle protected software to any files sections if there is no dongle available.

As w/ every company in the pioneer times, all started like a small family which slowly grew up and 1st there was the idealism and money was 2nd row. I can imagine they worked a lot and hard and the income was small for years.
The 1st generation were freaky guys, musicians too,- and often there were more people existing who participated on the rights of the early generation programs as it is the case today where a monstrous companys hire the coders all over the world for a fee.

Most old coders of those companys are gone since years,- but did they abdicate their rights which they eventually had or have up to now ? Can be, cannot be ...

In fact, the old founders aren?t in the company today anymore and no one knows how the legal department of Yamaha behaves in such cases. Have in mind the possibility, the leaving guys got a compensation and all belongs to the trust now,- the knowledge, the experience and the creativity of the work of that people, the functionality, concept and graphical design of the apps,- everything you can imagine. All this generally can be used in upcoming products and concepts as part of a idea p.ex.

I?m surprised how many people think about the products of software developers in the terms of "separate products".
The Steini sequencers we have today are all based on the very 1st sequencer they started to develope, on the Commodore, then the Atari ST, the Falcon, then the Mac and PC.
The stuff grew up and changed, became more and more complex, audio came up, the code was ported to other platforms and so on, but there was a beginning and I don?t believe the intention of companies is to publish their knowledge for free.
And they want you to buy their todays products and not to use their old ones for free because these were good enough too,- and they were,- how in the world should we have recorded and produced succesfull music in the past,- just w/ midi, tape machines and SMPTE ?

That?s the way how economy works folks.

to Charles:

Bankdumper (TM)
Software for Atari ST Computer and
Oberheim Xpander Synthesizer

All rights reserved copyright1988 Jacques Isler AG, Zurich

that´s the label on the black box (approx. 3 x 31/2 ")

on the label is a small yellow sticker: "including 1000 sounds"

inside cream/beige coloured floppy disk labeled:

Bank Dumper TM

Oberheim
Xpander

If you have it and it works, you´re the man.

oh i disagrre

a little bit with you pewe,

quote::::

Have in mind all the Steini apps need dongles, so if a program runs
without a dongle, it´s a crack,- that´s a fact.
Also, it makes no sense to upload dongle protected software to any files
sections if there is no dongle available

::::::::::::end of quote::::::::::::::::::::::::

only input towards this statement is ..
what if you buy something from ebay or your elsewhere,
and the disk its self is damaged or "craps-out"?

now do you see what i mean?? ,
we need a good place to backup our stuff.

then a user must find the disk ,,
and what a better place to start looking
then the atari midi files ?????

but i agree with most of the other stuff you mentioned pewe,
especially how a company struggles to acheive stability
finacially and popularity wise...

new or old steinberg is wonderfull
i like the atari versions much better than the pc versions
charles

And now ?

From my former mail below
>>>
If someone /*makes evident*/ there is an authorization to upload the content of that copy protected program to files sections of groups, I?d do it /*as soon I have the time for it*/.
<<<

(B.t.w my lawyer, he just leaved the house, says "no")

I myself have no interest to contact a person, who I?ve met on a Frankfurt Fair for a short time once and who for sure doesn?t remember who I was and who I am,- after ~ 20 or more years (I don?t know the year exactly).

I personally never had the intention to upload these files and I didn?t start this discussion. I only mentioned this program exsists and anyone who wants the program/patches can try to find it @ebay,- that?s all.

Since then, people try to persuade me to upload this copyright protected disk,- that?s get on my nerves a bit.
If J. Isler is the person who has the copyright for this program, he shall send me a valid digitally signed PDF which authorizes me to upload the disk at a time I can do it.

The request of Xpantastic is far beyond of a simple upload of the disk and needs some work,- extracting the patches from banks to a single patches raw sysex format for free download.
I simply don?t know why I shall do this w/ 1000 patches and remame them.
This is not my hobby folks.
My profession is musician, not files converter and I make my money w/ my work.

I payed for the program, I own the licence and I can do with it what I think is right for me.

As I mentioned before,- I share knowledge and experience via email and like to help, but I don?t like to support illegal practice.

@ PeWe,

it wasn't meant as a request for you to get busy proceeding that route. This http://www.jacquesisler.com/ bit of info was just a general contribution.

I myself too was marvelling some time ago about the whereabouts of Jaques Isler since I own the Matrix-6 Version (floppy) of the BankDumper and I suspected floppies won't last forever... :-)

But right now I don't worry about it and thus I too don't feel inclined to try to contact Jacques Isler myself.

@ Tony,

bouncing e-mails - for sure e-mail addresses openly displayed on websites attract tons of spam causing the inbox to be full, and maybe there's nobody there (holiday) to take care of it?

But through http://whois.domaintools.com/jacquesisler.com
I discovered another e-mail address and website of Jacques Isler.
The e-mail is <info @ g66.eu>, the website is http://g66.eu/

Another e-mail address, found there at
http://g66.eu/index.php?option=com_content&task=view&id=68&Itemid=51
or http://g66.eu/index.php?option=com_contact&Itemid=3
is <kicks @ g66.eu>

There is also a phone number mentioned:
+49 (0) 461 1828 066 (7:00 - 22:00 h in Germany)
+49 (0) 461 1828 093 is a fax number.

Maybe someone is into asking him about releasing his old Atari Software as Freeware?

This much for now,
:^) Greg

paul is it ok if you share your treasures with me , i got a tx81z and i use
cubase, have you founc any thing yet?\

not to many people here use real ataris any more.
i am one who does use real atari...
so finding these items might be a small bit difficult , emulation is
dominating the atari world..
and sometimes if a program works in an emulator like steem , it will refuse
to work correctlly in a real atari...or vise versa work on real atari and
not work in emulator.

charles
i might send you some files i know i have cubase score
and i think i have some tx81z editors around here somewhere.

I'm looking for the final version of Steinberg Synthworks

for the TX81Z.

http://www.atarimag azines.com/ startv4n4/ patcheditor. html

Steinberg Service Team released a cd-rom with the final versions

of Cubase and Synthworks for Atari (1999).

http://tamw. atari-users. net/cubase. htm

I have the dongle, maybe someone has this last version?

Thanks,

Paul

There's one on this page:
http://www.hitsquad.com/smm/atari/?page=1

listed as tx81z.zoo.

and also listed here as an arc file:

http://www.umich.edu/~archive/atari/Music/
Best wishes

Log3 is rare to find,- sometimes @ebay.
If you have NSL, the dongle and Unitor2, you can also start w/ a C-Lab
Export which is easier to find.
How many extermal hardware synths are you using ?
You don?t need a Log3 (which is a dongle too) for additional midi outs
if you are fine w/ 48 midi channels (Atari A, Unitor E/F).
You only need a quality midi thru box w/ 2 midi ins, a used Casio TB-1
p.ex.(2 in/ 8 out routable by switches).

Let's see, I have a few good gems in my synth rack.

Akai S6000
Korg M1R
Yamaha TX802
E-Mu Proteus MPS
Alesis D4 and DMPro
,,and trying to nab a Kurzweil K2000

I know all those have Thru. I'm at the moment looking for a few more Outs and Ins for future purchases to get some massive sounds for a couple of studio projects I'm working on.

I know the C-Lab Export has MIDI timing issues through the C and D outs so that's why I was looking for a Log3 since it bypasses (or reroutes BCD to ghi) And with all my synth gear, I know I'll run out of channels eventually.

The Unitor is awesome btw. I've been using the sync to clock into ProTools and it works like a charm.

If you guys see a Log3 let me know though.

W

Hi Wayne,
try here:
http://www.keychange.co.uk/

Barrie (the guy behind Keychange) always has most things in stock
including Log 3s and Unitors, and yes, he does send world wide.
Best wishes,

Dave.

>
> I know all those have Thru.

A midi thru box behaves competely different than a midi-thru conecctor on the synths/tone generators.
The midi thru connector of the synths adds latency, a qualitiy midi thru box not.

> I'm at the moment looking for a few
> more Outs and Ins

A LOG3 adds no MIDI-ins !
If you want to add midi ins and outs to your setup,- go for a used midi-matrix/processor and/or a combination from merger(s) and thru box(es) in addition.

> for future purchases to get some massive sounds
> for a couple of studio projects I'm working on.

That?s right, but the 1st out (B) of the Export has definitely no timing issues, C is usable for all the non percussive sounds and C is usable for slower attack pads and so on.
If you route your tracks of projects right having this in mind, you cann use the Export successfully.

> And with all my synth gear, I know I'll run
> out of channels eventually.

Eventually !?
If I see your rig above, it?s a very small one compared to mine (sorry). I have 8 times more outboard gear in use.
I did large productions w/ only the AtariST4 A I/O and the UnitorN (for NSL) plus an Export, using 4 patterns in parallel (ABCD) in NSLs arrange list. This is a max. of 64 midi tracks similar to 64 midi channels.
You transmit data of 64 midi channels via 4 midi ports,- ATARI A, Unitor E+F plus Export B and you?re fine.

With your setup above you don?t run out of midi channels,- you?ll run out of voices/polyphony available 1st.

> The Unitor is awesome btw. I've been using the sync to clock into
> ProTools and it works like a charm.

Confirmed. All the Unitors are great. I use Unitor N and Unitor2 as also the Export and a LOG3 and more...
Nothing beats Atari midi timing, this also in sync.

> If you guys see a Log3 let me know though.

I recommended the Export only because the LOG3 is hard to find.
I buyed the LOG3 together w/ a Unitor 2 for running Notator Logic 2.5 and NSL.
In most cases, if offered, you?d have to buy this package completely, a single LOG3 for sale is so rare you eventually have to wait month or years for.

With Notator Logic 2.5, you have more midi channels available as w/ NSL and you can use Unitor2, LOG3 and Export together!

Here?s a Notator Logic 2.5 incl. LOG3 available from a german dealer, see item #13 on this page...
http://www.atari-fachmarkt.de/Musik-Midi_c_3.html

EUR 100.- = USD 127.32 = GBP 85.94

prices for Export vary between 30-60.- EUR ...

WOW REALLY HOW MANY TRACKS PER SONG DOYOU HAVE ?
WHAT TOS DO YOU USE TOO?

I GOT MY MIDEX WORKING AND BEEN USIG IT BUT THE ONLY SET BACK NOW IS SCREEN REDRAWS ARE A TOUGHY..THEY ARE SLOWER WITH THE MORE TRACKS I HAVE PER SONG.

charles midi gfa pascal schrieb:
>
> WOW REALLY HOW MANY TRACKS PER SONG DOYOU HAVE ?

Oh,- that can be very different. Depends on the song itself.
You know, today I use also a PC based DAW w/ Cubase SX3, but have all my Atari stuff in addition, just because here are all my songs and arrangements fom the past in stock too,- mostly in Notator format.
A lot of ?em weren?t relased and include nice parts p.ex.,- so for me, it?s easier to use the Atari/Notator format instead importing midi files containing 16 tracks only per pattern and arrange/edit/requantize all this again in a modern DAW because of different resolution. I used always 1536ppq w/ Notator SL.
Too much work and wasted time.

Songs could be only a few midi tracks if there were many guitars and vocals in the front and if there were a drummer and/or percussionist available to record audio. I also don?t use all my midi outboard tone generators in every song.
But if I did complex arrangements alone, incl. all the drums, percussion and sometimes orchestral percussions in addition, the quantum of midi tracks rised fast.

I use(d) to have a separate track for each of the drum/percussion instruments and I use(d) to have a separate pattern of 16 midi channels for the orchestrations w/ 1 sampler in multi mode p.ex..
This makes it easier to record audio tracks one by one later because of better overview, easy muting tracks and better timing during audio record in sync w/a multi track recorder.

Some midi tracks are needed for separate midi controller lanes too,- you might listen to a kind of midi-mix during arranging incl. volume fades, pannings and so on and before you record anything.
This can cause some timing gliches if all is playing in realtime, so, if you start to record midi tracks to audio one by one, simply mute all not needed tracks and mute the controller lanes too, avoiding unwanted controller-events affecting the recording of your pure signal which has to be full volume throughout w/ no pannings because you do this in the audio mix later.

Rule:
Never change programs within a midi-track
Don?t insert CC-controllers in a midi track together w/ the midi-notes
Don?t change midi channels within a midi track.

Otherwise you aren?t able to copy patterns in the arrange list to only one pattern incl. rendered midi transpositions, velocity offsets and so on without getting cluttered program changes, transpositions, velocity jumps, volume an panning changes across the tracks resulting in a endless editing of these copied tracks during recording audio.

If you work w/ signature changes and timing offsets of patterns in the arrange list, it?s even more important to organize the miditracks and patterns right.

Good organization of tracks and controllers cost miditracks.

> WHAT TOS DO YOU USE TOO?

TOS 1.4 w/ ATari MegaST4
TOS 2.06 w/ Atari MegaSTE
Something in between (the last one) for the 1040STEs

Today, the Mega ST4 and the 1040 STEs only run Steinberg Synthworks bankmanager/editor programs for the midi tone generators/keyboards, so I run Mega STE 4 w/ Unitor 2 and Log3, MegaST4 w/ Unitor N and Export and 1 1040 STe w/ a Midex.

>
> I GOT MY MIDEX WORKING AND BEEN USIG IT BUT THE ONLY SET BACK NOW IS SCREEN REDRAWS ARE A
> TOUGHY..THEY ARE SLOWER WITH THE MORE TRACKS I HAVE PER SONG.

I use Cubase Atari only in the case someone comes up w/ tracks created in Cubase Atari format (this happened in the past).
I prefer Notator SL for the Atari platform, Notator is the tightest program w/ midi.
I use Notator Logic 2.5 to import Notator SL files/songs to change from pattern oriented sequence structure to a linear track based sequencer structure.
This makes it easier to import midi into any linear track based DAW.

I?m able to run all my midi outboard instruments (22 devices,- 30 if you count a TX816 as 8 DX7) some in mulitmode, w/ Notator SL, Unitor N (or Unitor 2), Export or Log3 and a Sycologic 16in/32 out midi matriss in realtime to DAT or any other stereo recorder without any timing issues at once.
Well, you need a lot of outboard FX and mixers for this, but I did this during the times I only recorded vocals and guitars to a 8-track recorder w/ the midi playback running into the mix in realtime.

Today w/ a DAW like Cubase on the PC, I can record all the tracks to harddisk, no question.
But it works like described above also and demonstrates the power of midi w/ Atari computers and Notator.
And I have still my 8- track tape recorder left here, running in SPMTE sync,- sometimes it?s also a great idea to route software instruments out of the DAW to the tape recorder and back to the DAW as audio,- makes

a different sound.

thats so desrable pewe! cool too!

yep i get any more than about 20-30 tracks of multi note,multichannel stuff and the redraw on cubase is not so good , but usable!

i usally just do tracks into tracks but have separate independant drum note tracks

and then like you mentioned separate tracks for the control changes and other for patch. because chasing one of those is difficult through the event editor.

charles keep it up ,,maybe we trade couple midi files sometime?

Hi guys!

This is all extremely interesting :-)..., but may I remind you that this site is just the atari-midi 'ARCHIVE'.
Some years ago we needed some more yahoo diskspace, that's why.

The big scene is at: atari-midi@yahoogroups.com
(That's were the fune is :-))

Best,
Dr A

ok , as long as i'm subscribed , it don't really effect me that much.

did yahoo lift the exceed limit yet?
i think these two groups are about the best thing going on the internet and
anticipate people uploading items from now until
the year 3000!!!
i hope we never run out of programs for the atari

even shareware,commercial,cracked,hacker,,whatever..i love em all!!!!

charles
anybody ever get that improvisor program included on a st format cover disk
to work?
i think its got a version of merrry xmas it mutates into a mild weirdness..
mine worked slightly then bombed..

656. Help finding SoundDiver! or better software to operate Kawai Spectra via Win XP

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2008-12-30 06:58:31 UTC
From: peilong75
Topic: 656 Message: 656

Hello, I recently got ahold of a Kawai Spectra synth which I've become quite attached to. I have been trying to connect it to my PC running Windows XP. I noticed that some users made available a patch editor for it that runs on SoundDiver. I then found out SoundDiver is owned by apple, who actually discontinued the software several years ago. My first thought was that it might be possible to still obtain a pc version of sounddiver on the internet somehow, but it seems nearly impossible.

I was wondering if there is any other way in which I can use the patch editor for the Kawai Spectra eventhough it was created to be used with SoundDiver; is there any new librarian/midi software that can communicate with my old synthethizer? I don't know about computer programing or have much experience with sound modules or synths but I am getting quite confortable with my KC10. Well, hopefully someone might be able to help me on this. Could any of you share SoundDiver 3 or else point me in the direction of it?
Perhaps there is a better software that is at least in the market right now and which I could use to operate and interact with my Kawai Spectra via Windows XP; any suggestions?

thanks a lot. I really appreciate any help.

I don't know anything about the Kawai Spectra, but you might want to try two universal editors/librarians: MIDIQuest from SoundQuest and UniSyn from MOTU.

Good luck,

Jeff

Hello, I recently got ahold of a Kawai Spectra synth which I've become

quite attached to. I have been trying to connect it to my PC running

Windows XP. I noticed that some users made available a patch editor

for it that runs on SoundDiver. I then found out SoundDiver is owned

by apple, who actually discontinued the software several years ago. My

first thought was that it might be possible to still obtain a pc

version of sounddiver on the internet somehow, but it seems nearly

impossible.

I was wondering if there is any other way in which I can use the patch

editor for the Kawai Spectra eventhough it was created to be used with

SoundDiver; is there any new librarian/midi software that can

communicate with my old synthethizer? I don't know about computer

programing or have much experience with sound modules or synths but I

am getting quite confortable with my KC10. Well, hopefully someone

might be able to help me on this. Could any of you share SoundDiver 3

or else point me in the direction of it?

Perhaps there is a better software that is at least in the market

right now and which I could use to operate and interact with my Kawai

Spectra via Windows XP; any suggestions?

thanks a lot. I really appreciate any help.

you can still find soundDiver 3. it's around. depends on how you feel
about using 'warez'. if you still are looking for this tomarrow
message me and i can find it for you, like i said it's around.

gotta crash out now, tis late.
k

p.s. a soft called Midiquest is most complete i've seen since
sounddiver was kidnapped and murdered by apple. it's around too.

i think you are wrong dopelrr , there is no warez version out there,
avalon
sound designer
soft synth
midiquest
yes,
no warez of sound diver or sound sound surfer either!
if so please show me , i have a large collection and would like to add..
there is zero interest from the atari community to develop programs ,so the
handfull of users left have to seek
programs where we can find them.
charles

Hey guys, I found it. Charles is dead-on in that we have it tough finding some programs and the community is all we have; so share we shall. Particularly when corporations like Apple decide to drop a powerhouse like SoundDiver for no reason at all, worst yet, when there are hidden agendas. in any case, I found SoundDiver 3 and would like to upload it to the group's file folder. the thing is, it's not uploading, the rar is only 35Mb yet it always fails. any suggestion?

is this for the atari?

i would like the atari version ....
there is a demo version in one of these atari archive file ares but i get
the impression you wanted the whole
enchilata!
either way email me what you found , please

hello ? peilong3 you should also have tryed to find "SOUND SURFER"
it belongs alongside sound diver, no joke , its another emagic program ,,for
the atari too!

charles

alright, SoundDiver is up now, Files/APPS/Emagic folder and inside
there are 9 pieces. Turned out uploaded files can't be larger than 5MB
so I had to split the .rar into 8 parts, the .bat file joins them
together. I'm aware commercial files are not allowed but, since Apple
efectively killed SoundDiver some 6 or 7 years ago, this is hardly
considered 'commercial' any more.
thanks to doplerrr for pointing me in the right direction. I'll be
tinkering with SoundDiver and the Kawai synth over the weekend, will
let you guys know how it turns out.
Thanks again.

Hi Charles !

Some details:

Soundsurfer is a preset-, bankmanger only,- a librarian.
Sounddiver includes Soundsurfer and is a preset-, bankmanger, librarian
as also a preset-, patch-editor

Polyframe 1.0 / 1.2 for the Atari is the ancestor of Sounddiver (not
Soundsurfer) and is a modular librarian and editor too.
Polyframe comes w/ less modules/adaptions but includes a generic
adaption offering the possibility to create your own modules/adaptions
for your outboard midi devices which aren?t included as adaptions in
Polyframe.

IMO it?s not worth to do a search for Soundsurfer.

What you need, Polyframe and/or Sounddiver, depends on which outboard
midi devices you own.

I own both the programs and Sounddiver runs best w/ Mac OS9.x on a Mac
PPC or maybe a G3.
Polyframe for Atari needs a Atari ST or STe w/ 4meg of RAM and a harddrive.

Polyframe covers my:

Roland D550
Korg M1r /M1r ex
Korg Wavestation
Oberheim Matrix 1000
Yamaha DX7 / DX7mkII FD / TX modules
Yamaha SY/TG 77
Yamaha TG 500

... and a bunch of other devices like some AKAI MB modules, Lexicon LXPs
and such ...
The adaptions for the modules mentioned above were included in version
1.2 of Polyframe, I never did my own adaptions.
You can create a large library for all the different modules
presets/patches included in this ONE library or you can create separate
libraries for the dedicated modules. Some adaptions are very good, some
less ...,- there are some w/ "quick edit" and/or "in depth edit"
functionality.

It?s worth to have Polyframe for the Atari IMO.

You?ll run into incompatibilities of programs and hardware modules w/
both the programs, Polyframe and Sounddiver.

Sounddiver w/ Mac OSX is a halfass solution because some functionality is lost w/ OSX.

Some of the Steinberg Synthworks programs do a much better job than Polyframe and Sounddiver ever did, but you need a separate Sythworks program for each synth/tonegenerator then and as far as these were available ever.

Best is to have a mix of all these programs or decide to move to todays solutions for PC/Mac ...
http://www.squest.com/

But also this can be a nitemare,- like all the software thingys... :-)
And it?s not cheap anyway.

peilong u dummy !
this is a pc versio of sound diver,,

what are you doing to this group ?

atari computer...from the 80's remember?

its a shame these file sharing areas lie about the content of their files ..

i think i should ask the moderator to politily and correctly remove any
thing related to this thread ..
so long peikong, i like to think of this as an atari only forum ..if its
not code that can be used on the atari or atari programs , then there are
better more suitable places to ask for warez or help ,or whatever,,
ok thanks anyhow.
charles

awesome thanks pewe , i got a good many of these my self ,
and if i wasn't learning how to program the darn atari i would
probally own a few more these..
i am in admists of writing a few of my own programs but alot of the handshaking and some language barriers are preventing my full scope of interfacing with the midi protocol.....loads of time invested.
so if any body have cd with kinda same stuff i will mention .

i do not have the following titles :
sound surfer
sound diver
polyframe
icconix
gramd slam
logic
more.....but i cannot think of them at the moment.

charles
thanks pewe you always a good sport at helping me with first hand experience!
basically anything else i have ....these are all atari programs or atari relatedi must add
.

Subject: Re: [atari-midi-archives] prilong3 and synth editors

Hi Charles !

Some details:

Soundsurfer is a preset-, bankmanger only,- a librarian.
Sounddiver includes Soundsurfer and is a preset-, bankmanger, librarian as also a preset-, patch-editor

Polyframe 1.0 / 1.2 for the Atari is the ancestor of Sounddiver (not Soundsurfer) and is a modular librarian and editor too.
Polyframe comes w/ less modules/adaptions but includes a generic adaption offering the possibility to create your own modules/adaptions for your outboard midi devices which aren´t included as adaptions in Polyframe.

IMO it´s not worth to do a search for Soundsurfer.

What you need, Polyframe and/or Sounddiver, depends on which outboard midi devices you own.

I own both the programs and Sounddiver runs best w/ Mac OS9.x on a Mac PPC or maybe a G3.
Polyframe for Atari needs a Atari ST or STe w/ 4meg of RAM and a harddrive.

Polyframe covers my:

Roland D550
Korg M1r /M1r ex
Korg Wavestation
Oberheim Matrix 1000
Yamaha DX7 / DX7mkII FD / TX modules
Yamaha SY/TG 77
Yamaha TG 500

... and a bunch of other devices like some AKAI MB modules, Lexicon LXPs and such ...
The adaptions for the modules mentioned above were included in version 1.2 of Polyframe, I never did my own adaptions.
You can create a large library for all the different modules presets/patches included in this ONE library or you can create separate libraries for the dedicated modules. Some adaptions are very good, some less ...,- there are some w/ "quick edit" and/or "in depth edit" functionality.

It´s worth to have Polyframe for the Atari IMO.

You´ll run into incompatibilities of programs and hardware modules w/ both the programs, Polyframe and Sounddiver.
Sounddiver w/ Mac OSX is a halfass solution because some functionality is lost w/ OSX.

Some of the Steinberg Synthworks programs do a much better job than Polyframe and Sounddiver ever did, but you need a separate Sythworks program for each synth/tonegenerator then and as far as these were available ever.

Best is to have a mix of all these programs or decide to move to todays solutions for PC/Mac ...

Charles,- I have some of ?em but these are dongelized.

It is:
Polyframe 1.2 incl. all the modules
Sounddiver MAC (I think it?s 3.0 but I?m not sure at the moment and it?s just only installed on a computer I got some time ago)
Notator Logic Atari 2.x (I think it?s v2.5,- the only version which is worth to have because it includes the environment features as in the Mac Logic versions midi part already).

Definitely I need a manual for Notator Logic Atari version 2.0 or higher, so if anyone could upload these files would be great.
v.1.5 / 1.6 / 1.7 may be exist as the basic manual and addendums but don?t cover all the changes made w/ v. 2.0 and higher.
From version 2 up, Notator Logic is a different beast.

For Polyframe 1.2 a dongle is needed (I own one), and this dongle has a "thru" port to add another dongle,- p.ex for X-alyzer.
For Notator Logic, the Emagic LOG3 is needed and possibly a Unitor 2 to have enough midi-outs available as also to run Polyframe and Notator 3.x plus Notator Logic on the same machine, which is a great midi-composing/arranging solution.
Unitor 2 has a 2nd dongle port and Polyframe looks for it?s dongle at slot #2,- so that?s the hardware combo needed in addition w/ Log3 which is the dedicated dongle for Notator Logic.

From: PeWe
Topic: 666 Message: 669

Charles,- unfortunally this link doesn?t work for me here.

No, Notator Logic Atari isn?t Notator.

C-Lab /Emagic Notator up to SL 3.x is a pattern oriented midi sequencer
and Emagic Notator Logic is a linear based one.
The Midi part in Notator Logic Atari 2.5 is the same you find in the
later versions of Logic for the Mac and PC.
The Atari version just only lacks the audio engine.

Because Emagic Notator SL 3.x and Notator Logic 2.5 share the same
dongle, it?s possible to run both programs on the same machine, having
the different song formats on the same harddrive.
Therefore, it?s possible to import complete Notator SL songs, created in
a pattern orientated way, directly into a linear based midi sequencer,-
Notator Logic 2.5,- without transfering midi files, which doesn?t
represent a complete Notator song at all, between 2 machines by using
floppies.

Import a Notator SL song into Notator Logic and you have it in tape
machine style in Notator Logic including all the midi-ports routing for
Export/Log3, Unitor 2 and Atari itself as well as all the dedicated
midichannels neccessary for the tracks playback correctly.
I fact, once Notator SL songs are imported into Notator Logic Atari,
you?re able to import THIS song into Logic Mac/PC, or you have the
choice to export Notator Logic Atari midi tracks and import ?em into any
other linear based DAW in full length, not pattern based parts of tracks.
Result:
You don?t have to re-organize the tracks or parts (pattern positions)
according to the DAW sequencers timeline.
This is a big time-saver if you have a lot of old midi songs, patterns
and sequences done w/ Notator SL in stock and want to remix or redo
something.

With Notator Logic 2.0, the "midi-environment" feature was introduced,
so the midi handling is different compared to the previous versions, but
this "midi-environment" is/was used until Apple Logic 7.x in general and
disappeared w/ Logic Studio 8 AFAIK.
So, Notator Logic 2.0-2.5 seems to be a pretty good midi engine, the
most advanced one for Atari ST/STe/Falcon except Steinberg Cubase 3.1
Atari special edition which is a similar one.

Means,- a manual version 2.0 is needed,- maybe it was the last one and
all the further improvements /add-ons are documented in the updates
text "read me" files up to version 2.5 only.

ok ok ok ok ! , enough about notator , i really own alpha and that as far as i go , i use cubase and perferr edit tracks much more than cubase (its a stronger recorder) but cubase allows effects to be applied in midi real time so two differents agains...
thanks for info pewe but too much for my tiny round head , sorry
i will leave off here because like i said , i know of and only ever use cubase or edit tracks

charles unless there is a reason i should use notator or creator,,but i've tryed an much inclinded to cubase or edit track

672. Re: [atari-midi-archives] Re: Help finding SoundDiver! or better software to operate Kawai Spectra via Win XP

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2009-01-03 04:37:56 UTC
From: charles midi gfa pascal asm
Topic: 656 Message: 672

i take no offensive , good having you here raises the fasination levels.of
interests.
its just getting too damn difficult reliezing who wants what ...
and what they want from who ,

especially when it comes down to what from who. and when ,or where???
..okay
don't really have to follow so closilly,

any how , primarily from my perception this is
a user group i use for the past five years..
based uponthe 16/32 bit micro computer named" atari st computer" in
connection with the midi protocol to digital interface into midi
periphreals... you wern't to far off though... , you just had a pc
,,hey who doesn't , i am using one right now!

ok stay good
charles
where is sound diver for the atari anyhow?
pewe maybe you send me a copy please then i can try to hotwire it into my
st at boottime
sichern beenden==save quit

Sorry, no. Sounddiver was the program I have only for Mac OS.
I would be interested in a Atari version too.

Hi peilong,

I'd suggest you remove the SoundDiver files again from the files section, since
a) we don't want to store warez here in the files section.
b) the files section holds only 100 MB total and this upload takes 35% of that total file space.
c) it's a PC program and not Atari.

Perhaps you can leave a link to the source where you found it in the first place, and anybody wo wants to get this PC version nevertheless should download it RIGHT NOW before it's removed.

Thanks anyway for your good intentions and happy new year to all.

:^) Greg

in that same directory is turbo synth too! thats a deal
all for free ,,
if i knew that before i bought this stuff 7 years years ago !!!!

but it does not loose its appeal.

AURA is C-Lab?s midi eartraining and education program.

Also great is MIDIA

AURA and MIDIA were created as learning programs in 1st order but can be
"missused" in different ways if you have the idea.

steinberg had one too!!!
it was called ...??????..i can't think of the name,
but it had a tree on the top for a logo. i'm sure of it ..released around the same time
masterpeice was by the steinberg team.
i think ,
i wasn't around to get the stuff at the time ,
its mainily second generation to me , but
as far as i know . this is all true..

Thanks for removing the files, as that is the main reason we don't
won't it here.

Tim

690. wheres the action2?

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2009-03-31 01:34:09 UTC
From: charles midi gfa pascal asm
Topic: 690 Message: 690

hey bunch i got a technical question...

in a type one midi file (multiple tracks)
whats the algo rhythm like when dealing with
delta times,
status events
and
meta events?

i have my midi file player written into basic computer language
but the events are all screwwy...only in a type one file format...

so my question is??
if the next event is not a status event and the delta time is 0 ,
i can read it directly and out to midi port? ,
or
is it imparitive that i go back and deduct the first delta from the array
and then sift the lowest delta time out of the bunch and then play from
that track?

any experienced users know this?

charles

691. Manual - Notator Logic 2.0

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2009-04-10 18:17:22 UTC
From: viv.chocolate
Topic: 691 Message: 691

Is there a manual for Notator Logic 2.0 anywhere? I use it on Atari 1040ST.

Thanks,

Viv

Hi gang,
you can see some info here:
http://www.youtube.com/watch?v=5jHX5YmzGS4

which is the first part (or thereabouts) an upload of the entire Notator Logic video manual. You'll see links to the other parts elsewhere on the page.
It may not be the actual manual, but it may help!

Best wishes,

David.

I had forgotten how to mute tracks - but with perseverance I managed to locate it and work out how to do it. I do have the VHS video tutorial and I should have a look at it again really. It's just that it would be handy to have a manual to look up certain things whenever you need them.

Viv.

yeah both those program are terrific , if you know who to use the archives i bet somebody there has
them for sale , i own both personally , but i do not know if i can give them out .

plus i do not know if i should be dropping names towards the person selling sound designer or turbo synth..

but use teh archives and you will find both ..or contact me if you have no success.. i still use.
great speaking to you ,
chow

sorry ,,teh = the
archives,, i know there is a atari midi archive group and a atari midi
group.
go into the message section and "search" for digi designs or turbo synth
or avalon..

keep trying!!

Thanks for your input Charles, unluckily the bot seen i have the profile to be a spammer... so i can't join it for the moment.
Anyway in the same time i found a copy of sound designer in atari-forum but i guess it needs the dongle ? (not receives my 1040STF yet).

oh yeah use that one , thats me on there too , use the soft synth , its good
for developing
pure waveforms , harmonic blending , then it even tramnsmits to sampler.

so you got an akai right ? i believe it totally works with it.
i do alot of big time tinkering by developing my own atari midi stuff.
any interest to you?

join its very easy and i know the guy selling lives in germany and surely
was looking to sell his turbo synth at this time last year.

charles

Oh well you'r the same person, i'm "nuts" on atari forums.
Yes exactly, good news then, i will receive a S950 in few days. I use an Emax I and a Roland S760 too.

Sure it interests me, what did you succeed to do for your instruments ?
Myself i'm not a software programmer and don't know Atari platform yet, did'nt have a chance to have those computer when i was young.

I'm quite excited to build a dedicated midi station with all the great midi tool i discovered while reading on Atari. (IPS, Camus...)

But really i'd like to find a midi sample dumper/editor for Emax and S950. You say there are synthesis capabilites, it is more exciting then. :)

You may know which between Turbosynth or Sound designer (or another one) i should aim for that use ?

I asked a copy on Atari forums too, i'll see.

706. turbosynth

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2009-04-26 22:38:42 UTC
From: midi pascal
Topic: 706 Message: 706

me personally i used to use it with the s900
turbo synth that is.
too make samples ,,, then extract with sounddesigner and "fix/alter"thru
turbo synth..execlusive back out to synth.
i was impressed though last year when i got soft synth ..i had my eyes out
for that a while!@!@
its good , i have fun and acheive decent results.

as for midi stuff , i kinda tryed everything at once ,
here it goes....

i wrote a editor for the sounds in my little yamaha pss

i wrote a rx 11 system excl dumper...

then i did some algo midi song composing stuff ,
like using mathmatic formulas to predict the outcome of musical notes
genearted by predefined variants..) also have written midi capture routines
to save these works as midi files...
different stuff , some only have constructed.

tried a sequencer (did not know enough of the protocol) took time off
,learned for while ,
(thanks group!!!!!!)

made graphic interface for ali nutron music lead-r sample wave genarator...

picked up pascal as programming language
picked up asm as programming lanuage

currently playing around with commercial standard midi file play routine..
real professional development type of approach...misiing good timing routine
though!!!!

now just gathering up what programs i can find to save for the atari ..still
programming and waiting until i become a much more effiecient programmer..

spent 4-5 years before all that making midi music..atari d-110,tx81z,akai
s900,prophet2000 boss drumm machine etc etcetc....

any how if you're serious and stay at it , things come to you, things you
even may think are impossable at this moment ,they will be simplified and
at your disposal..

what i used to believe was difficult was to obtain that sound i always look
for in music ,
especially with the type of instrumentation i owned ,
but sure enough i worked out the hissed, static and crackles until i have

nice smooth synth stuff..

took a little while!!!!!!!!but i got it!!
charles

You say there are synthesis capabilites, it is more exciting then. :)

Ok, long experience here.
Do you know if i can use a cubase 3.1/dongle + midex+ + sound designer/dongle at the same time or at least without swapping dongles ?

Thanks for your help

Fun, i am a modern daw user and powerful computer softsynths and all tat stuff And my eyes are like yours when i dig in atari midi world.

Topic: 708 Message: 708

well no i think ?
sound designer -i am thinking of only has copy protection on their disks..making it "copy proof"

and cubase /midiex /dongle takes alot of memory and cpu, if you go mixing it around , oh boy , you be rebooting alot,,i think .. i got a hard drive and all that but mainily it does not all happen at once if you know what i mean.

as a personally preference i just do , music sessons ,
or
sound wave making ,
not the two combined, tuning is an other element i should bring up ..takes time!!

charles

From: PeWe
Topic: 706 Message: 709

As Charles said,- Turbosynth and Digidesign Sounddesigner I / II as also
the "universal",- don?t need dongles.

I own Sounddesigner Universal and Turbosynth as well as Cubase 3.1, but
never used ?em on the same machine.
I doubt, multitasking is a good idea w/ Atari machines, it slows down
the speed of the computer too much, the experience I had w/ C-Lab
Notator and Bankmanagers/Editors running simultaneously and even there?s
the max. of 4MB RAM available.

The Sounddesigner apps need the full 4 megs of RAM anyway, so the only
chance would be a Falcon w/ much more than 4 megs of RAM.
On the other side, - not all the apps run well w/ all the available TOS
versions,- I don?t see Sounddesigner Universal 1.5 running on any of my
Ataris even the disks are readable and in good condition.
My oldes machine is a Mega ST4 w/ TOS 1.4 and it doesn?t run on this, -
seems it needs TOS 1.2 ...
Well, Sounddesigner Universal is the only app I own w/ this behaviour.

I?m a modern DAW user also, but have 4 Ataris in my homestudio in
addition, just because "old" hardware gear needs the old computers and apps.
Akai S-1000, S-1000PB and S-1100 here too.
But I use Steinberg Wavelab on PC as a sample editor these days and
don?t think Steinberg Avalon is an app you?d need today.

Thanks for the clarification Pewe, i understand better now.
I didn't understand it don't need a dongle.

As for multitasking, since then i ask for atari gear on a music forum i use. Someone offers me a ste, stf, falcon030, mega st, cubase 3.11 and
cubase audio with interface. I expect it will be concluding.

As for Avalon (appart of old apple computer and Alchemy) is one of the only program i found that is supposed to allow communication or 12bit midi dump with emax.

Digidesign Sounddesigner Universal translates all the 8- and 12-bit sampler formats from the past incl. Emax.
16bit sampler formats were added w/ version 1.5 I own.
It also does Oberheim DPX-1.

The only format it isn?t capable to handle is EMU II.
That?s because there was a separate Soundesigner application for EII existing.

The prob w/ Avalon is, you definitely need a dongle.

Today, there are several solutions to deal w/ the old sample formats, but mostly regarding storage of samples, conversions and creating images of floppy disks.
It might be a solution to use a combination of such solutions on a modern computer which is faster and doesn?t deal w/ midi sample dump, which is too slow.
You need SCSI as a minimum IMO and the only ATARI machine w/ SCSI I have experience with is Mega STe 4. Never had a Falcon here, so it might be a alternative too.

Definitely, today I avoid using ATARI for sample editing.
Wavelab on PC is great.
For transfer of samples from hardwaresamplers to a computer, I?m setting up a old Mac G3 now.
Internaly, you can use IDE drives w/ larger sizes and externaly you connect SCSI drives which is ideal because my hardware samplers external drives are SCSI too.
So it?s easy to disconnect the sampler-drives and simply connect these to the G3 using it as a mass storage drive.
If you have sample library CDs, do SCSI copys of these w/ the Apple machine, these are 1:1.

The most promising conversion app is Chicken Sys Constructor,- it converts sampler content back and forth and regardless of their age, it also deals w/ EII.
"Back ?n forth" means,- if you have some WAV or AIF samples, content from software samplers p.ex., you?re able to reconvert this for you hardware sampler from the past too.
http://www.chickensys.com/products/sw_iteminfo.php?sw_name=Constructor

EMXP is also worth a try, especially for the Emax
http://users.skynet.be/emxp/

there are also links on the site for tools for OB-DPX-1 and Omniflop, an app which deals w/ almost any floppy disk formats.

This way, you?re able to convert samples and program structures into a format your prefered sample editor is able to deal with and then back.

Even you?d have to deal w/ 2 or 3 different programs then, it?s much faster than dealing w/ midi sample dump,- and the programs would reside on the same machine.

Avalon is a collectors item, but not for todays daily work I fear.

Nice information, it needs to be think there are many solutions.
I also think of an apple computer and alchemy dedicated to the emax since it can edit its parameters too but may be i will find sound designer great for truncating and all that stuff. if sds will no succeed to upset me before, lol.

I already use EMXP but i have no chance to load disks made with it, even with emax formatted disks. I asked on emax group.
I thinks emxp is the easiest solution for my Emax I classic with no scsi this day.
I can keep my samples on the computer and it is easy to use too, but for the moment i was totally unlucky to load them.

Note: I don't use sample librarys, i sample my material.

Sample Wrench for Windows and Amiga will work with this sampler and
many others.

Thanks trylobite i already tried samplewrench demo but since midi transfer is disable in demo mode i didn't have a chance to know.
Did you actually test it with an emax I?

Hmm. I've only used the Amiga version which is not limited in any way.

I've used it with Yamaha SU-10, Roland S-750 and Roland S-760.

It's a peice of hardware, Charles. A digital to analog converter.

>is that existing in reality or just mad eup

The only thing non-existent is your comprehension. You know, being stupid isn't a crime. There's nothing wrong with not knowing much, but it takes a lot of gall to accuse someone else of 'making up' the existence of something because of your own inability to comprehend. Standard Charles-type behavior, I suppose, but as usual, inappropriate.

723. Tracker / Software Synth Question for the Atari Falcon

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2009-06-18 21:12:20 UTC
From: atarifalcon030
Topic: 723 Message: 723

Hello Atari Folks,

Does anyone know of a tracker or software synth for the Falcon that combines both the YM chip sounds with the DSP sounds? I seem to find programs that do one or the other but not both...

If any exist, are they MIDI playable from a keyboard controller?

Thanks!

724. Re: [atari-midi-archives] Tracker / Software Synth Question for the Atari Falcon

From: redspecter
Topic: 723 Message: 724

Such software does not exist. I wrote a falcon softsynth years ago that accepts plug-ins and I considered a ym plug-in but alas never wrote it. I recommend buying an STE and using MaxYMizer for cool midi controlled YM sounds. Then you can use your falcon to run ACE Midi. That would give you access to all kinds of sonic possibilities via midi. -j

Topic: 725 Message: 726

use cubase for the atari , it imports pro 24 tracks then from there ,
correct or modify tracks
and save to midi file ,,, these midi files are the industry standard ,, type
0 or type1

from here it should be easy to load into commercial sequencer...all use midi
hope!!!!

Hi!

At the moment I can't remember a ready made thrubox with 16 outputs.

Here is one with 8 outputs:

http://www.amazon.com/MIDI-Solutions-T8-8-Output-Active/dp/B0002GHAEG

Also M-Audio has 8 channel thru boxes...

But maybe some of your synths have a midi thru. Normally up to 3 gadgets can
be switched in line via MIDI thru without (big) problems. In this way you could also work with a
thrubox with only 4 outputs (4 output with up to 4 gadgets per output)

for the DIY guys: Maplin had a simple 8 output thrubox:
http://www.wiseguysynth.com/larry/schematics/thru/

I built this one and it works fine! The optocoupler circuit in this design has been wired correctly
To offer a low delay time - most circuits on the web miss the resistor on the base of the optocoupler output darlington - this make the optocoupler quite slow.

There are several one out there new,- Midisolutions are the best actually.
Otherwise you find ?em at ebay.

I have 2 or 3 leftover in good condition form Yamaha (combined
Midi-Tru and Merger w/ routable clock port) and Monacor (2 Ins by 2x 4
outs,- A and B = 8 Outs) and a midisolutions Midi Merger.

I also have a 4-In, 8-Out Steinberg Midi Matrix 4/8 for sale, a rarity.
It has routing knobs, so you?re able to route any of the 4 midi ins to
any of the 8 Midi outs manually on your demand.
Simple but great box for any midi studio.

PM if you?re interested please.

For 14 devices you need a 16x16 matrix like a Sycologic M16 w/ M16R
remote controller.
It?s expandable to 48 Midi outs by the M16x output expansion units
offering 16 Midi outs each.

Unfortunally these are discontinued since the late 80th,- but I have two
and won?t miss ?em.

Waldorf had a 15x15 unit in the past too ...

Miditemp had the MT16X which was the best at all becuase it did
everything you?d ever expect from midi processing.

There were also units by Jim Cooper, but these merge to ins only
compared to the Miditemp.

Midisolutions Midi Tru boxes all lack of more inputs than ONE.
There?s a rack unit T-8,- one midi in and 8 midi outs,- so you could
combine 2 of em if this fits for you.

What kind of latency difference is there between using a simple box like this, vs. direct-hookups between Atari (/notator/midex) & sound-machine?

Thanks

Ensoniq made the KMX-16... any opinions on that one? We have one
where I work but I have never used it.

Topic: 728 Message: 742

I assume there?s no difference.
The "simple" box is manual switching where the more expensive and complex boxes had preset programmability and recall via remote controller and/or MIDI prg.-change commands as also the ability to send dedicated progam changes per midi channel to the devices being connected to it?s MIDI outputs.
Sometimes, there were more additional features like mergable inputs and other midi data processing.

If you need any midi matrix at all depends on you midi hardware configuration planned.
So,- if you p.ex. only have one or very few soundmachines available, you probably don?t need it.

Interesting. I upgraded to Biab 2009 everything pack in June. You are suggesting two different questions. Biab on Atari St is like KCS level 2 Download the guide on Tim's midi world. Biab is as is KCS Level 2 an algorithmic composer. Did they invent the style maker. That is your focus. Find that out first because if they have that you can make your own styles in addition to the 25 they offer you. The PC programs are so self-contained that there are no reasons to use the Atari ST except to learn the bare bones. But even then one of the wierd things about the Sequencing software is on the Atari, Amiga platforms they were almost artist and mathematician based more than musical. Craig Anderton who wrote the Dr T's KCS lvl 2 article was math and physics based. When you get into Biab now they give examples to all these ideas that were being introduced without examples. I like Easyscore on the Atari but with the exception of KCS Level 2 I don't
think there is much on that platform. If you have Reaktor 5 and Reason 4, Orion synapse, Cakewalk or Cubase or Logic you are covered. Check out Musicrow for independent instruments for Reaktor 5. It's worth making the changes.

Hi,

Falcon030 You can use one of the Electronic Cow pieces of software to generate YM Samples and use them in ACE tracker?
Or just sample the sounds! Combining ACE MIDI and MaxYMiser sound like fun!

redspecter I'd like to get a copy of the software you mentioned developing, Was it released publicly?

Cheers

Hi,

you load samples in ACE tracker. But when you like the sound of the YM
chip you shout use MaxYMizer.
Here you get the tracker version for free.
http://newbeat.atari.org/main.php?page=productions

For ACE Midi you have to pay. Please do it because it's a very powerful
program. :-)

From: macdougall.jason
Topic: 760 Message: 760

Hello,
new to the group. I own an Akai s612 sampler early 12bit lo-fi that sounds sweet to my ears. After reading an early Ensoniq Transoniq zine from 1986, I discovered some software that will communicate with the Akai S612, Mirage, Emax and Emulator II. I'm trying to find Softsynth by Digidesign for Atari/Mac. If anybody knows where i can find/purchase/trade this I would be very grateful.
I would love to transfer the 64k memory back and fourth and manipulate wave forms, for single cycle work this program looks like the bomb.

Wow, this dug up some memories for me. Unfortunately, i do not have any copies of Softsynth, but i do remember it well. It was waaaay ahead of it's time in the late 80s/early 90s. A nice Mac II with a NuBus Digidesign Audiomedia board, a copy of Softsynth and you have a poor man's (not too poor actually) Fairlight. At least for back then.

If anyone does come across any copies of Softsynth, i would also be interested.

Best of luck to you,
/KRM

I expect, w/ "Softsynth" you mean Digidesign Turbosynth application,-
latest version v2.0.

I have the entire range of Digidesign apps except Digidesign
Sounddesigner Emulator, which is a exclusive app for Emulator II.
It was already sold when I sold the Emulator II.

All the other is still here and for sale,- Sounddesigner Universal 1.5,
Sounddesigner II and Masterlist, Accellerator card for ATARI Mega ST4,
Soundtools AD-Converter, AD/DA-Converter, Digital Interface, cables.

Being 1st owner, I made the latest pics, up and running, in july 2012
for the australian "Scoperise" online mag hi-tech museum article because
I use Creamware and Sonic Core DSP systems w/ ATARI MIDI as a front-end
w/ C-Lab/Emagic Notator SL 3.21, Notator Logic 2.5 and C-Lab Emagic MIDI
hardware.

Pics here Scoperise hi tech museum
<http://www.hitfoundry.com/issue_15/mus_mst.htm>
Click the tabs labeled "Bud?s..." and you see the gear up and running.

Before it goes up to ebay this or next month, make me an offer if
interested.
The complete system is a rare collectors item and I think you won?t find
it complete again in that condition.

You are definitely right about the name (Turbosynth as opposed to Softsynth, although the later may have been a more apt name).

Wow, SoundTools AD/DA, that goes back some years. I assume that all your apps are Atari and not Mac?

Betreff: [atari-midi-archives] Akai S612 Sample Dump / Editor

Hello,
new to the group. I own an Akai s612 sampler early 12bit lo-fi that sounds sweet to my ears. After reading an early Ensoniq Transoniq zine from 1986, I discovered some software that will communicate with the Akai S612, Mirage, Emax and Emulator II. I'm trying to find Softsynth by Digidesign for Atari/Mac. If anybody knows where i can find/purchase/trade this I would be very grateful.
I would love to transfer the 64k memory back and fourth and manipulate wave forms, for single cycle work this program looks like the bomb.

soft synth and turbo synth are 2 different programs

they both have similar capabilities

ihave a soundtools 2 ad/da with an external box that takesa stereo jack and a spdiff input

and sounddesigner2

now soft synth was designed for doing wavetables

it did it like the se synthesis on the emax1 where you set the amplitudes for a series of wave forms made from additive synthesis and pitch envelopes

you do these 3 and then the program would interpolate

to create your evolving sound you could then dump it to a sampler mirage EII emax1 akai and a few others

the emax you can do this from the front panel

You are definitely right about the name (Turbosynth as opposed to Softsynth, although the later may have been a more apt name).

Wow, SoundTools AD/DA, that goes back some years. I assume that all your apps are Atari and not Mac?

Well, according to last post of Peter Ullrich, there?s also a Digidesign application called "Softsynth" existing.
Never knew that before and maybe it?s an ancestor of the later Turbosynth.

According to the Soundtools/Digidesign stuff I own,- yes, it?s all ATARI.

My friend and engineer owns the Mac versions and the converters/interfaces too,- and he has NuBus Macs in stock and just got my last screen adapter for such a machine,- so even my gear will leave the house, I?ll have access when I?ll ever need it again.

I?m definitely running out of room in my house and have to sell much more next future, not only the ATARI stuff, also hardware instruments and modules.

Hiya,

another program I think may do what you what is Steinberg Avalon for
the ST I don't know whether they did versions for other platforms but
it supports all those you listed I think?

i don't think sound designer or turbo synth or softsynth will do what this
guy needs , if i remeber it only does x7000 or s900
not the 612

boo hoo

what about links to sample vision is this little gem around?

also

give me an ideal of what you will trade for softsynth?

charles

Avalon ST looks good except there is no driver written for my S612 Sampler, furthest back they go is s700, And i believe the sampler rom is v1.0. Apperently on this unit there was a 3rd party v1.3 that allowed for six samples, currently this machine only does one shots. Softsynth SA(i believe a latter version) can be found, but it needs a special sound accelerator card to work in a Mac. But im hoping there is a 1986 version that works in the ATARI.
This thing has way more character than any plug-in I've used.

Yeah I went through a plug-in period too,f**king great but I always think hardware sound's better,and everybody is using plug-ins,you can tell them a mile off,little Jonny on his laptop and sister using a smartphone,actually that could sound interesting synced.. lol

You have obviously looked on web and seen the S612 software,try using the S700 driver I bet you it will work.

But anyway:-

http://fa.utfs.org/diy/akai_s612/index.html

I must go and download a manual for my Wavestation SR

773. .SEQ files and YSEDITOR

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2013-01-18 19:11:57 UTC
From: mopuss_y
Topic: 773 Message: 773

Hi, I'm new to Atari midi and have just started using the FB01-specific version of YSEDITOR (http://www.home.zonnet.nl/m.tarenskeen/yseditor.htm) in STEEM to create sounds on my Yamaha FB-01.

Does anyone here use YSEDITOR? I am intrigued by the .SEQ file that resides in the same folder. (DEF.SEQ). I guess it is a sequence file used by YSEDITOR when you click the SEQ button in the editor to audition a sound and I guess it's something like a MIDI file with note information etc. Does anyone know more about this? Is .SEQ a standard file format that Atari sequencers use? Sorry if this is a really basic question. I wonder if I can edit this sequence in a sequencer and get YSEDITOR to play a different one when I click the button.

And does anyone know if I can alter the little three-note test sequence that plays if you hit the TEST button in the editor?

If the above isn't possible, I will carry on using the MOUSE button to audition the sound, as this is quite neat (I don't currently have a keyboard, am on a promise of one!).

Mo

from my experience the seq.def holds information relivent to the device
being used but i could be wrong ,,
the tones can be changed by a programmer who programs atari apps...
i changed mine and have made a slightily different into as well .....
.if you really have the need for inputing values once the program starts, i
think i can write this into martains code for you,,,,,

favorable?

Thanks for the prompt reply, Charlie, and the kind offer of help. Sorry for my delay getting back.

Does that mean the YSEDITOR is open source? I didn't realise. I have done some programming before - I understand this program is written in C++.

However, I was hoping that it would be easy to change the sequence or that .SEQ was a generic format like .MID. Easy as in not something requiring a re-compile from source. I guess not. Not that a recompile is a hard thing, but you know what I mean! :) Something available to the average end user.

Hi everyone , I'm kind of new to all this Atari , MIDI
And I would like to know where I can get MIDI quest for Atari
From , and whether it would solve the problems that I'm
Having with my chetah mk7va controler and my emu protous
Module , any infomation greatly apreacheated
Thanks

Hi Luke,

I don't know where you would get midiQuest for the atari on web but
there is this I quickly pulled up:-

http://tamw.atari-users.net/cage_art.htm

Oh yeah and also checkout Uniman at:-

http://www.home.zonnet.nl/m.tarenskeen/uni_man.htm

this has a Proteus editor

Hi Luke
& welcome to the world of Atari midi.
I don't know where you can get MidiQuest these days, but if you are
having problems with your setup please give us some more details so we
can help.
What computer & o/s ?
How it is connected? .
What exactly is the problem ?

Regards,
Simon

No need for rudeness, Simon. I am trying to unsubscribe via a webmail account and it will not do so directly from webmail. Maybe you should ask politely first before assuming that sarcasm is appropriate.

hmm, well if your previous email, in upper case, with this demand in
it
"UNSUBSCRIBE"
isn't some degree of impolite I must have been asleep for the last
twenty internet years.
If you have a problem with your Yahoo Atari midi archives account that
you cannot solve with the links at the bottom of each mail it might be
more effective to email me 'off list' for a resolution.

Regards
Simon

Simon, I have never been a member of this group and I have never been a party to any rules governing the use of the group or email, so your assumption that I would know how to go forward from an inability to unsubscribe and do a request for off-list is actually not helpful. Someone with this address in years past obviously was part of the group. I attempted over quite some time to get them to address the issue but they would not. I would imagine they are no longer part of the list since they did not deal with it.

There were no capital letters in the text of my email. It is not rudeness to use caps in a re line to capture attention, nor is it a demand - it is common practice. It is indeed rude to use caps within the body as that is interpreted as yelling, but that is not the case yere.

Could I please just get some help with this? Thanks very much.

According to the Yahoo records someone at your email address
subscribed to this list on April 6th 2006.

I will now unsubscribe this address manually as it seems to be
problematic for you.

788. Re: Question about Hotz Christmas Songs Vol. 1

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2013-12-15 22:16:55 UTC
From: Steve Weber
Topic: 788 Message: 788

To all who are concerned, or maybe just a question. Many years when the Hotz Player was popular back in the lated 90's, I had received the Christmas Songs Vol. 1 from Hotz Interactive which I had purchased many years around that time. I would like to hear the songs in midi foprmat because I really enjoy Christmas music around The Christmas season. Does anyone have a way for me to get these songs into midi format? When inserting the floppy disk, it says I need the Hotz Translator II or the U Play Music programs, but they are for outdated OS's. I have downloaded the U Play Music demo for my Windows ME computer, but still unable to play the files. I can send the setup file for the Christmas Music Vol. 1 I have on my floppy disk if anyone can help. I so wish they still had the Hotz Player still around. Thanks for listening.

Isn't it loss of time? There are zillions of Xmas songs MIDI files on
the net... GM, GS, XG... some of them have very good arrangements.

Not really Daniel, because when I first had heard these particular midi files, some of these arrangements sounded particularly like some brass quintet arrangements I had played before and was interested in seeing how they were scored. Plus I really had enjoyed playing around with the Hotz Program on my computer. Steve Weber

793. Re: [ATARI-MIDI-ARCHIVES] Digest Number 370

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2013-12-17 11:49:29 UTC
From: Daniel Forró
Topic: 790 Message: 793

After some study about this particular software I see it's really something special and it can give interesting results. Question is how to convert data. I don't think it's possible to do directly from the floppy disk, if I understand well it uses special codes for scales, chords etc., and some kind of interactivity. I doubt the format was somewhere published...

So maybe the only possibility would be to record MIDI output from Hotz software to the second sequencer in real time, and save or export it as MIDI file. At least one version (variation) of the music could be done this way - it's possible when played for the second time, music will be somehow different in some details.

And if I'm not wrong this software is still offered for 199 USD, let's suppose it's a version for newer Windows... It still should be compatible with older data files, or not?

Come to think of it, Daniel, I would say you are right. The Hotts controller's output would be like a combination of one of those keyboards (where you hold down one key and it jams in C major; hold down the key next to it and it jams in C minor) - and Band-In-A-Box.

Expect much more musical, of course. But your point about it's output being a bit different each time is probably correct.

This may be part of the magic of why Steven is trying to re-create it.

David

And if I'm not wrong this software is still offered for 199 USD, let's suppose it's a version for newer Windows... It still should be compatible with older data files, or not?

Yes Daniel - the floppy disk that I have is only a setup.exe file that will setup the Christmas Hotz midi files only as long as you have the Hotz Trax 2, The Hotz Translator 2 Program , or the U Play Music Program on your computer. And I do enjoy playing with the U Play Music demo program on my Windows Me computer, but don't think $ 199 is that cost effective in my book, and unfortunately, the setup file will not setup on the computer with just a demo program. The U Play Music program allows you to play along with the program and using your keyboard that plays various notes from the given chord being played at the particular time. And thanks for your input David.

On Tuesday, December 17, 2013 10:54 AM, David Wildsmith <davidwildsmith@...> wrote:

Come to think of it, Daniel, I would say you are right. The Hotts controller's output would be like a combination of one of those keyboards (where you hold down one key and it jams in C major; hold down the key next to it and it jams in C minor) - and Band-In-A-Box.

Expect much more musical, of course. But your point about it's output being a bit different each time is probably correct.

This may be part of the magic of why Steven is trying to re-create it.

David

On Tuesday, December 17, 2013 6:49:29 AM, Daniel Forró <dan.for@...> wrote:

After some study about this particular software I see it's really something special and it can give interesting results. Question is how to convert data. I don't think it's possible to do directly from the floppy disk, if I understand well it uses special codes for scales, chords etc., and some kind of interactivity. I doubt the format was somewhere published...

So maybe the only possibility would be to record MIDI output from Hotz software to the second sequencer in real time, and save or export it as MIDI file. At least one version (variation) of the music could be done this way - it's possible when played for the second time, music will be somehow different in some details.

And if I'm not wrong this software is still offered for 199 USD, let's suppose it's a version for newer Windows... It still should be compatible with older data files, or not?

According to this post:
http://www.kvraudio.com/forum/viewtopic.php?p=5938267

I know this is an Atari Site...i have a real dos machine and trying to use it more..for some odd reason

Greetings,

SPG has been my MIDI sequencer of choice since the late 1980s. I was a tester for the company back then, also bought most of their other software. More recently I've run all of it - including a version of Intelligent Music's M - on DOSemu and DOSbox in Linux. Works perfectly.

I checked the Turtle Beach site this evening, it seems that the Voyetra DOS software has been removed from the Downloads pages.

Currently using it to write a long piece for piano.

Best,

ah, well thats new to me.
You might get more results from posting to the main Atari list

808. Mros driver for lynex sampler

Yahoo group: ATARI-MIDI-ARCHIVES
Date: 2016-08-22 11:38:37 UTC
From: roberflas@...
Topic: 808 Message: 808

Hi to all,
I want to use my Lynex sampler for Atari with cubase, but i can't use in the same computer because cubase
don't reconized the lynex midi port, i can use with notator and one port it is dedicated for lynex.
Anyone tell me how to program a mros driver for cubase discover the lynex midi port?

Thank you in advanced
Regards
